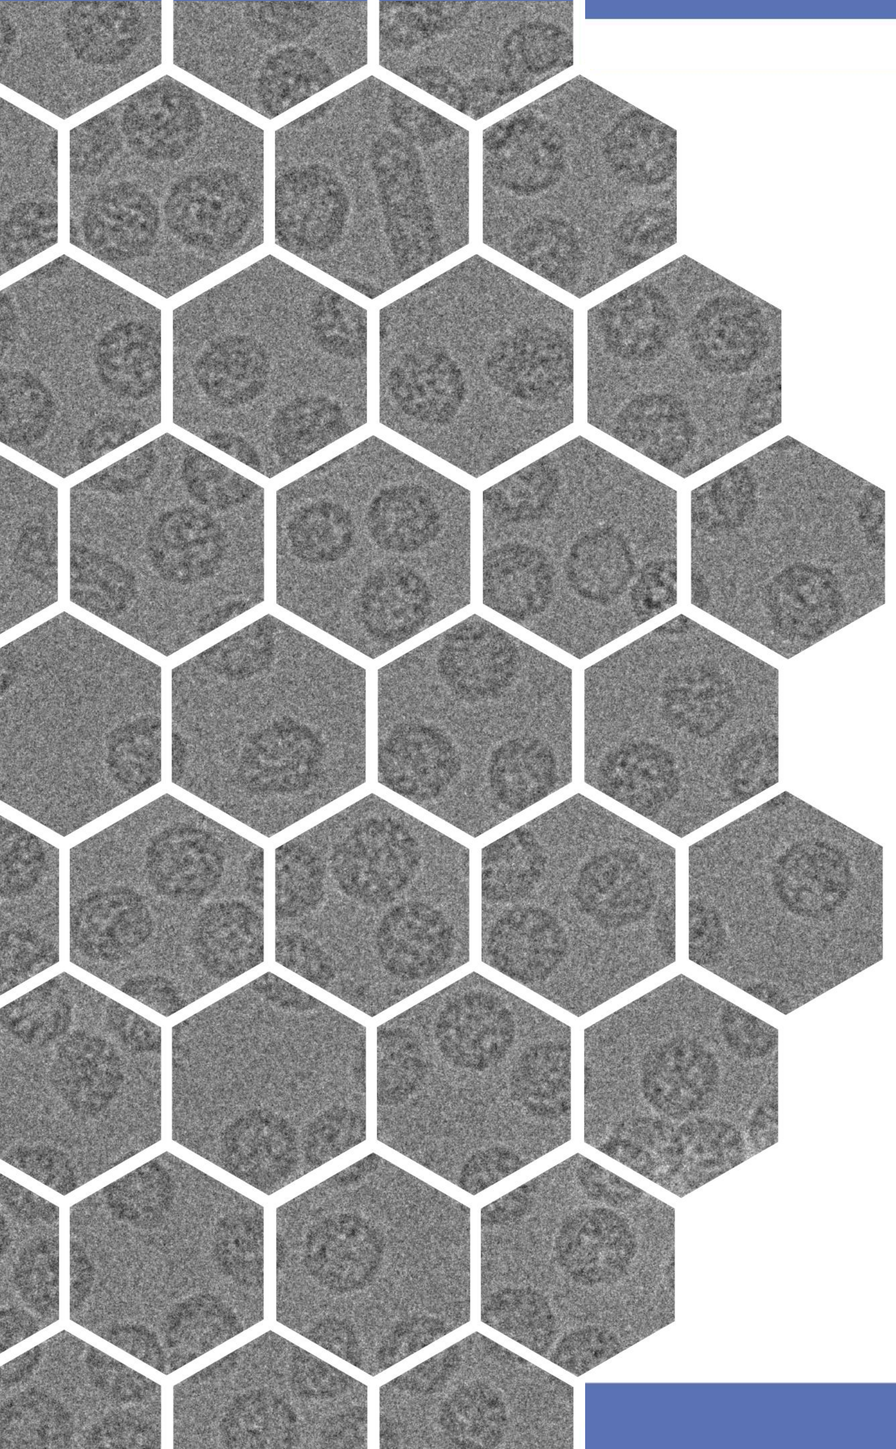
2024 Winter cryoEM course

Considerations for biological cryoEM

January 29, 2024

NYSBC SEMC



- Journal club and practical recap
- Considerations for biological cryoEM
  - Overview
  - Grids
  - What happens to a sample
  - Newer methods

Course logistics: main topics

Section I : EM fundamentals

Section 2 : EM crystallography

Section 3 : Tomography

Section 4 : SPA short course*
March 11-15

Section 5 : Future perspectives

Course logistics: Wednesday practical

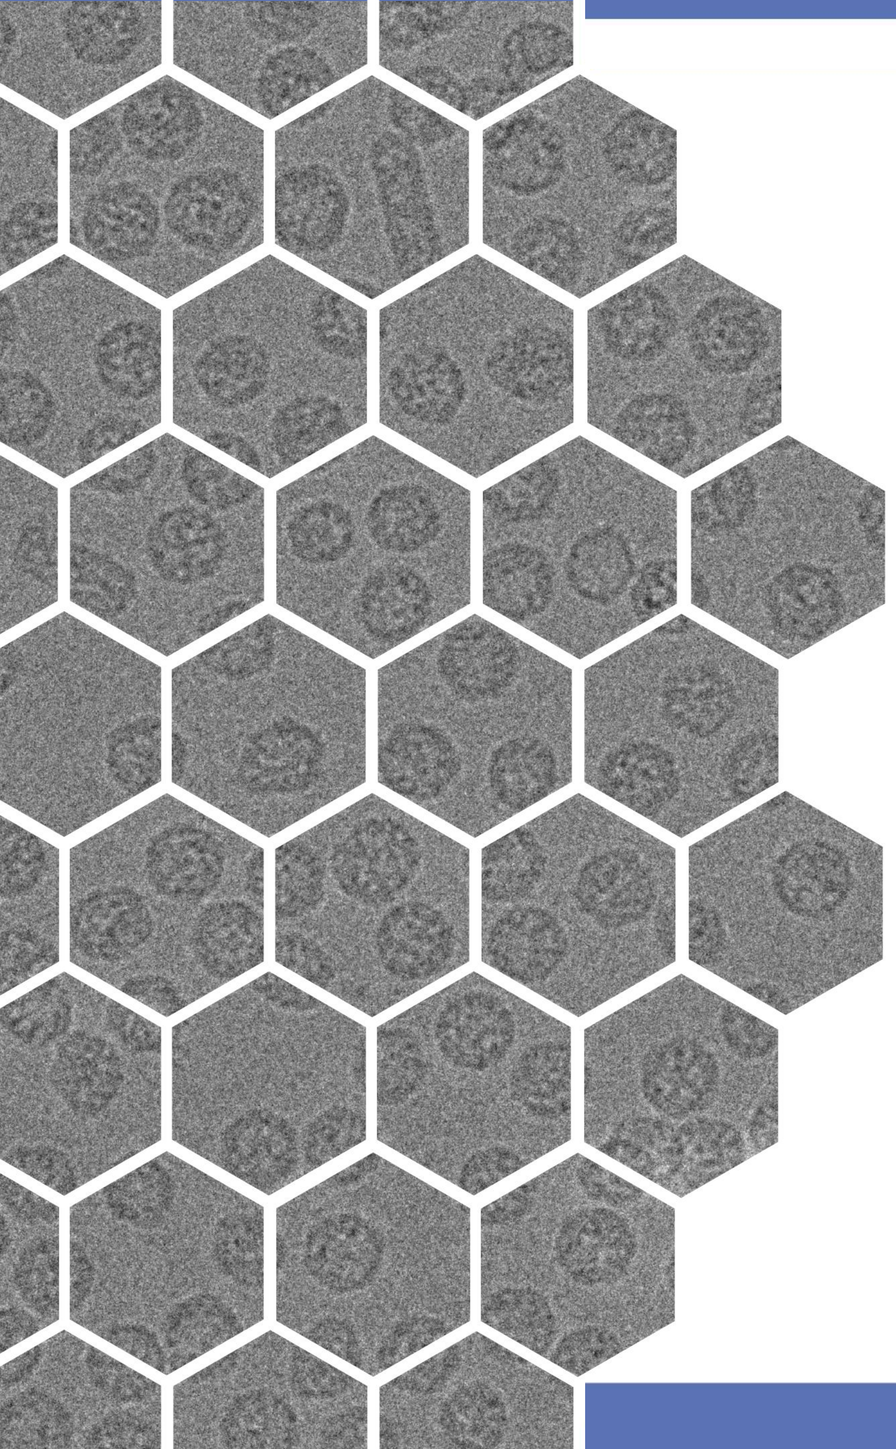
January 31, 2024

Sample preparation practical

-standard vitrification

-45 min first session

-30 min second session



- Journal club and practical recap
- Considerations for biological cryoEM
  - Overview
  - Grids

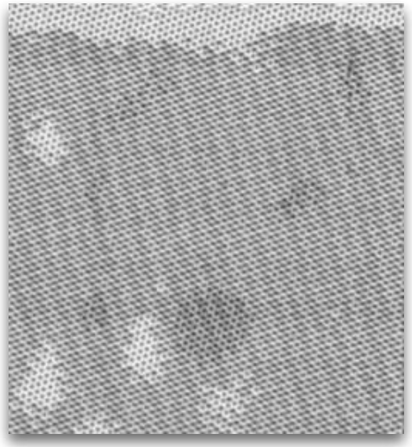
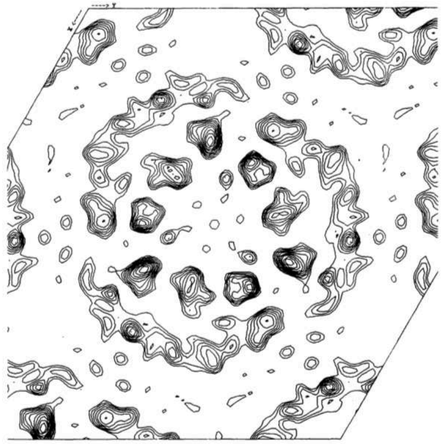
cryoEM: technology on the rise

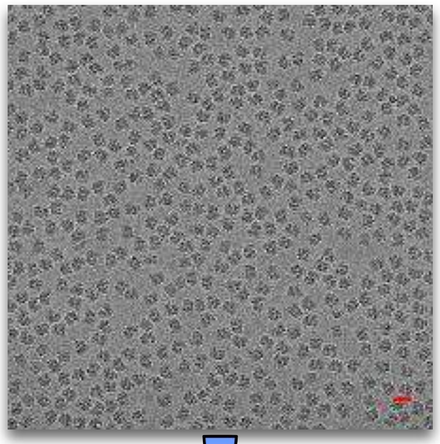
1986

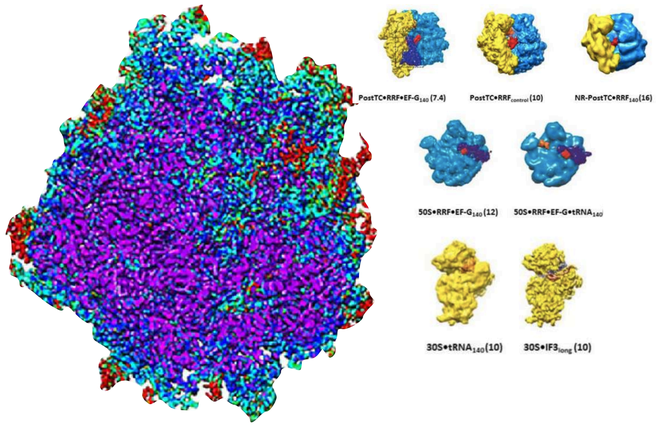




Henderson et al. (1986)

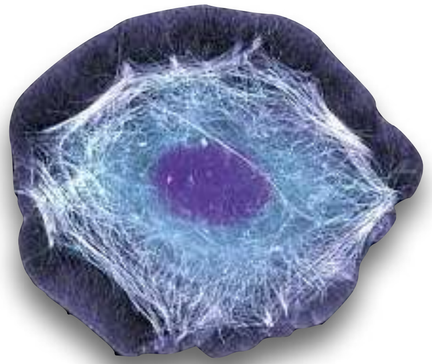
2017

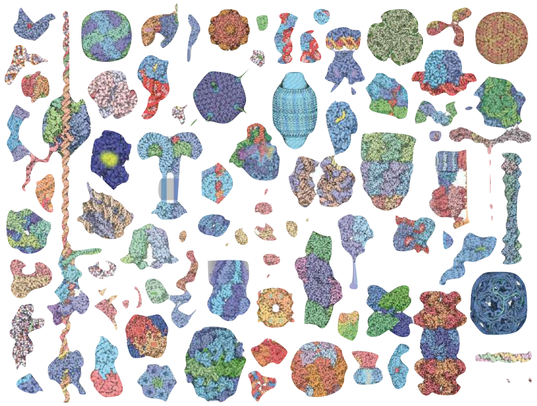




Frank et al. (2017)

in progress

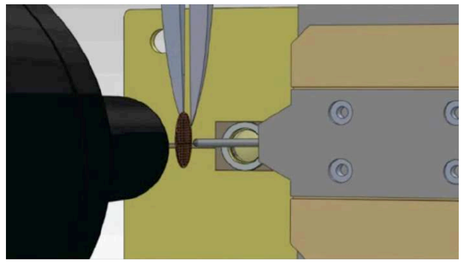


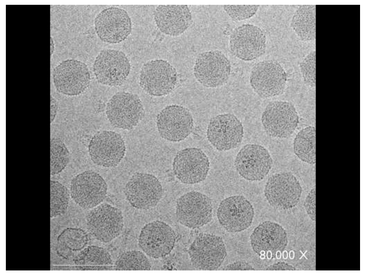


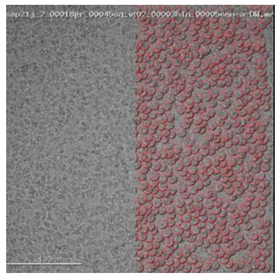
the next chapter

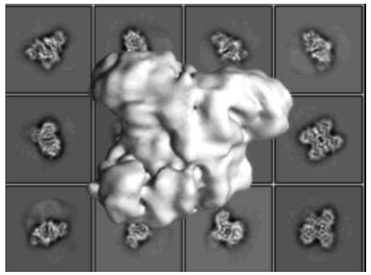
cryoEM: a technology on the rise

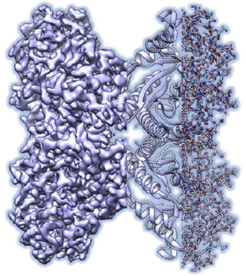
Single particle cryoEM

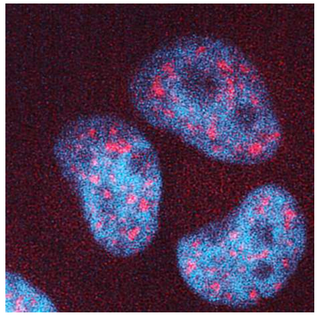


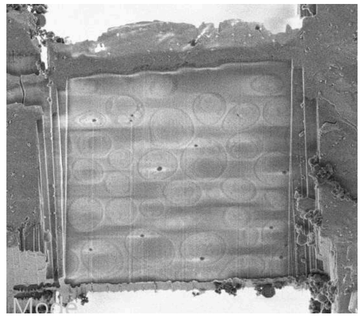


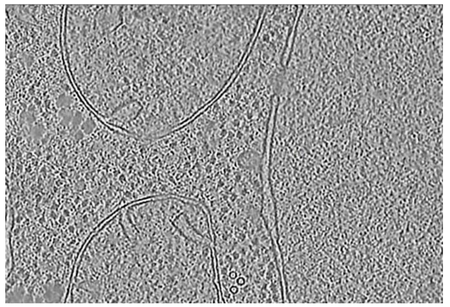






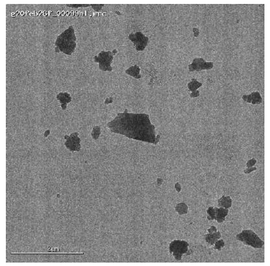


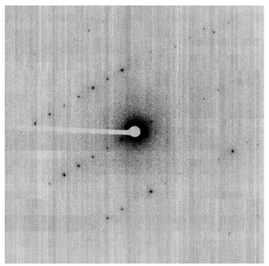


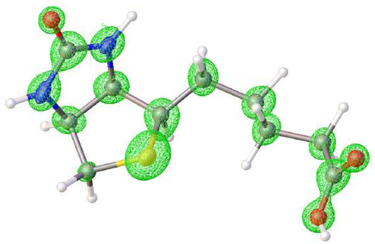


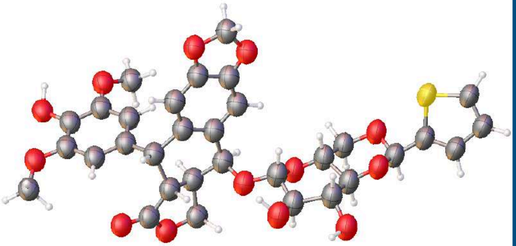
Cryo Electron Tomography (cryoET)

Micro crystal electron diffraction (microED)

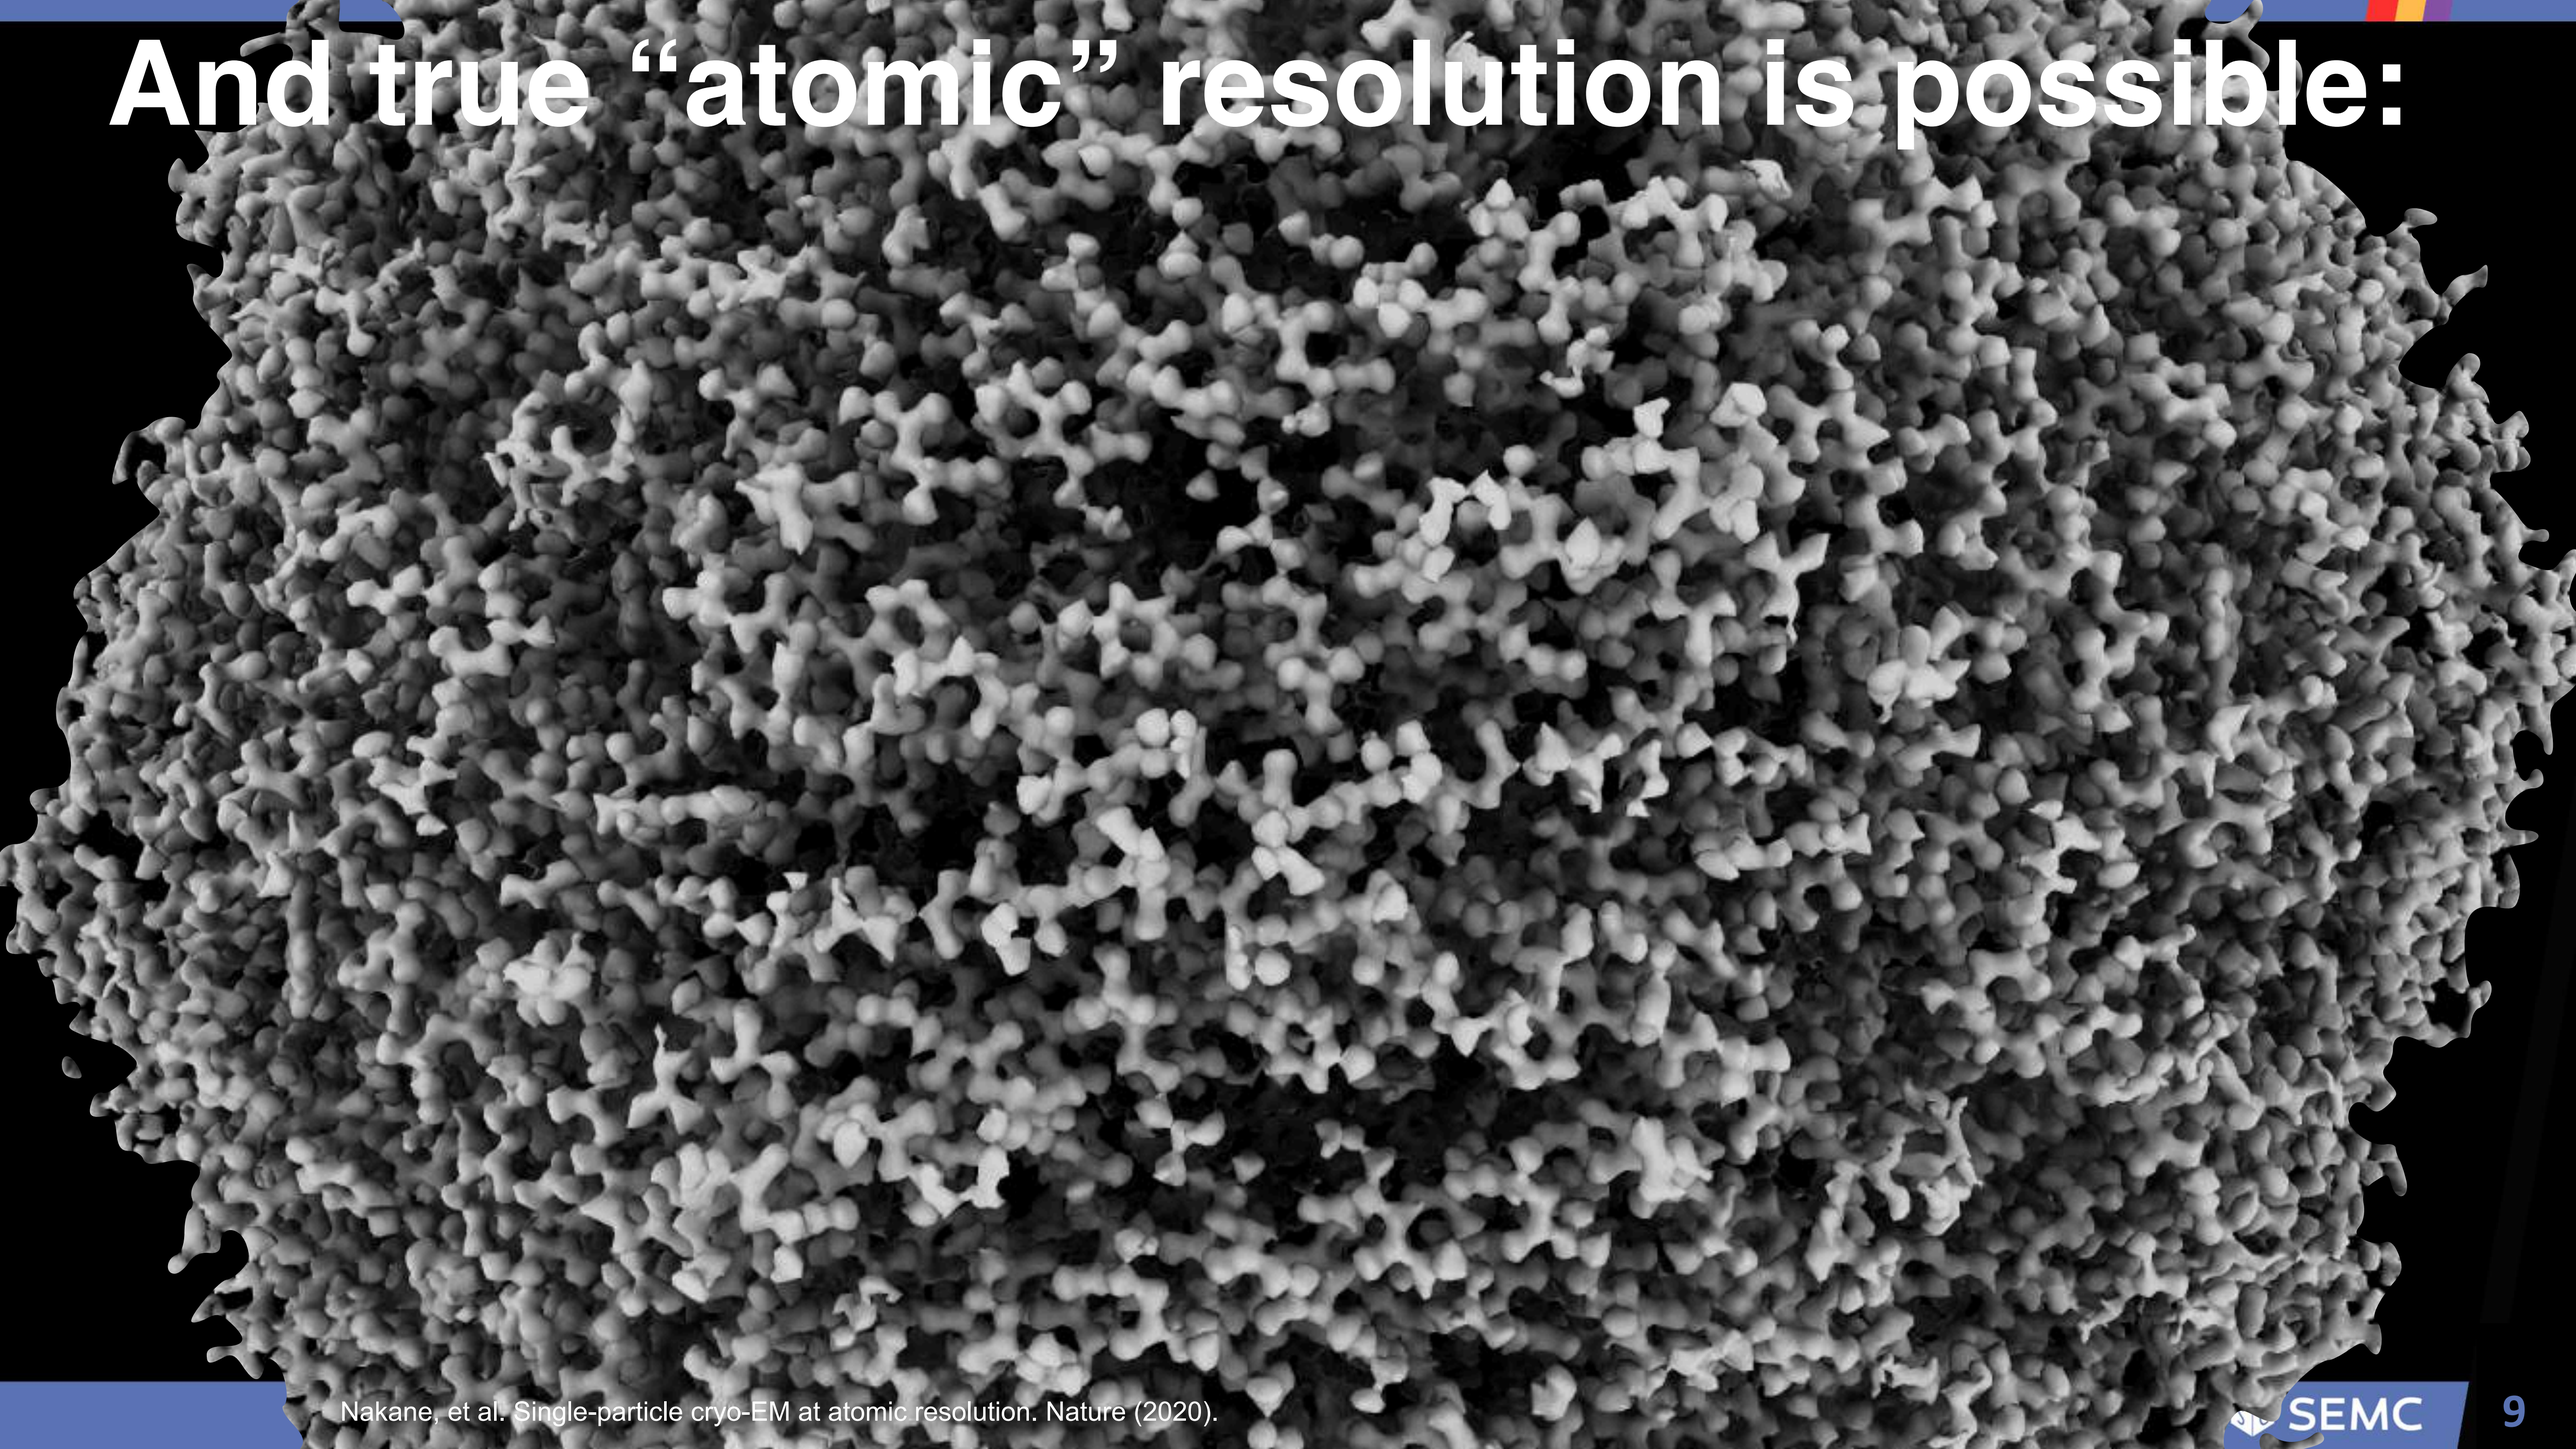






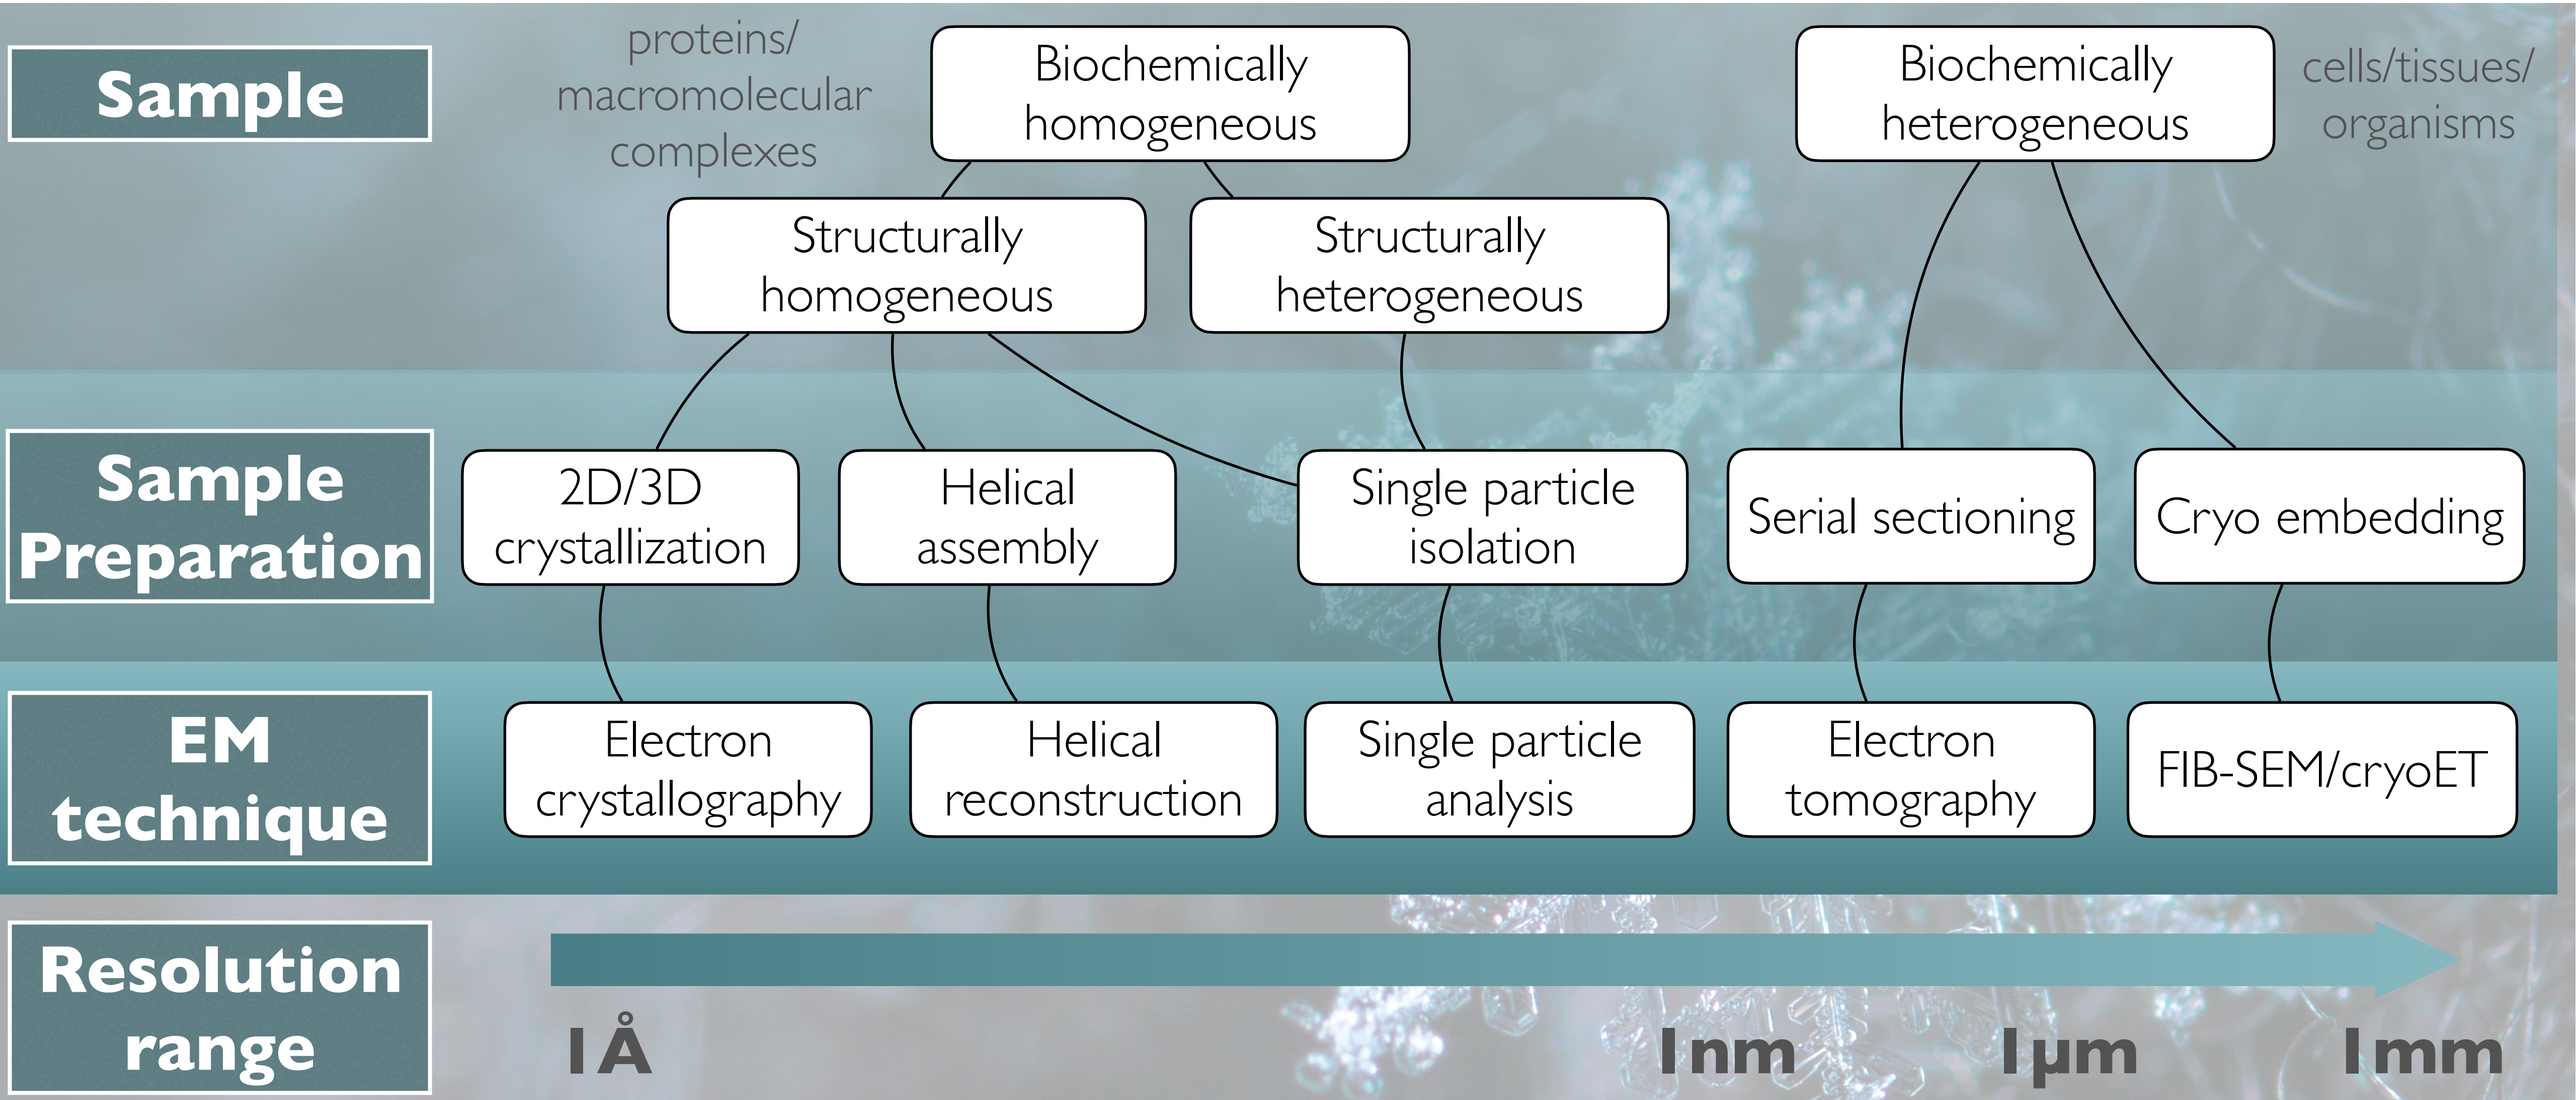


And true “atomic” resolution is possible:

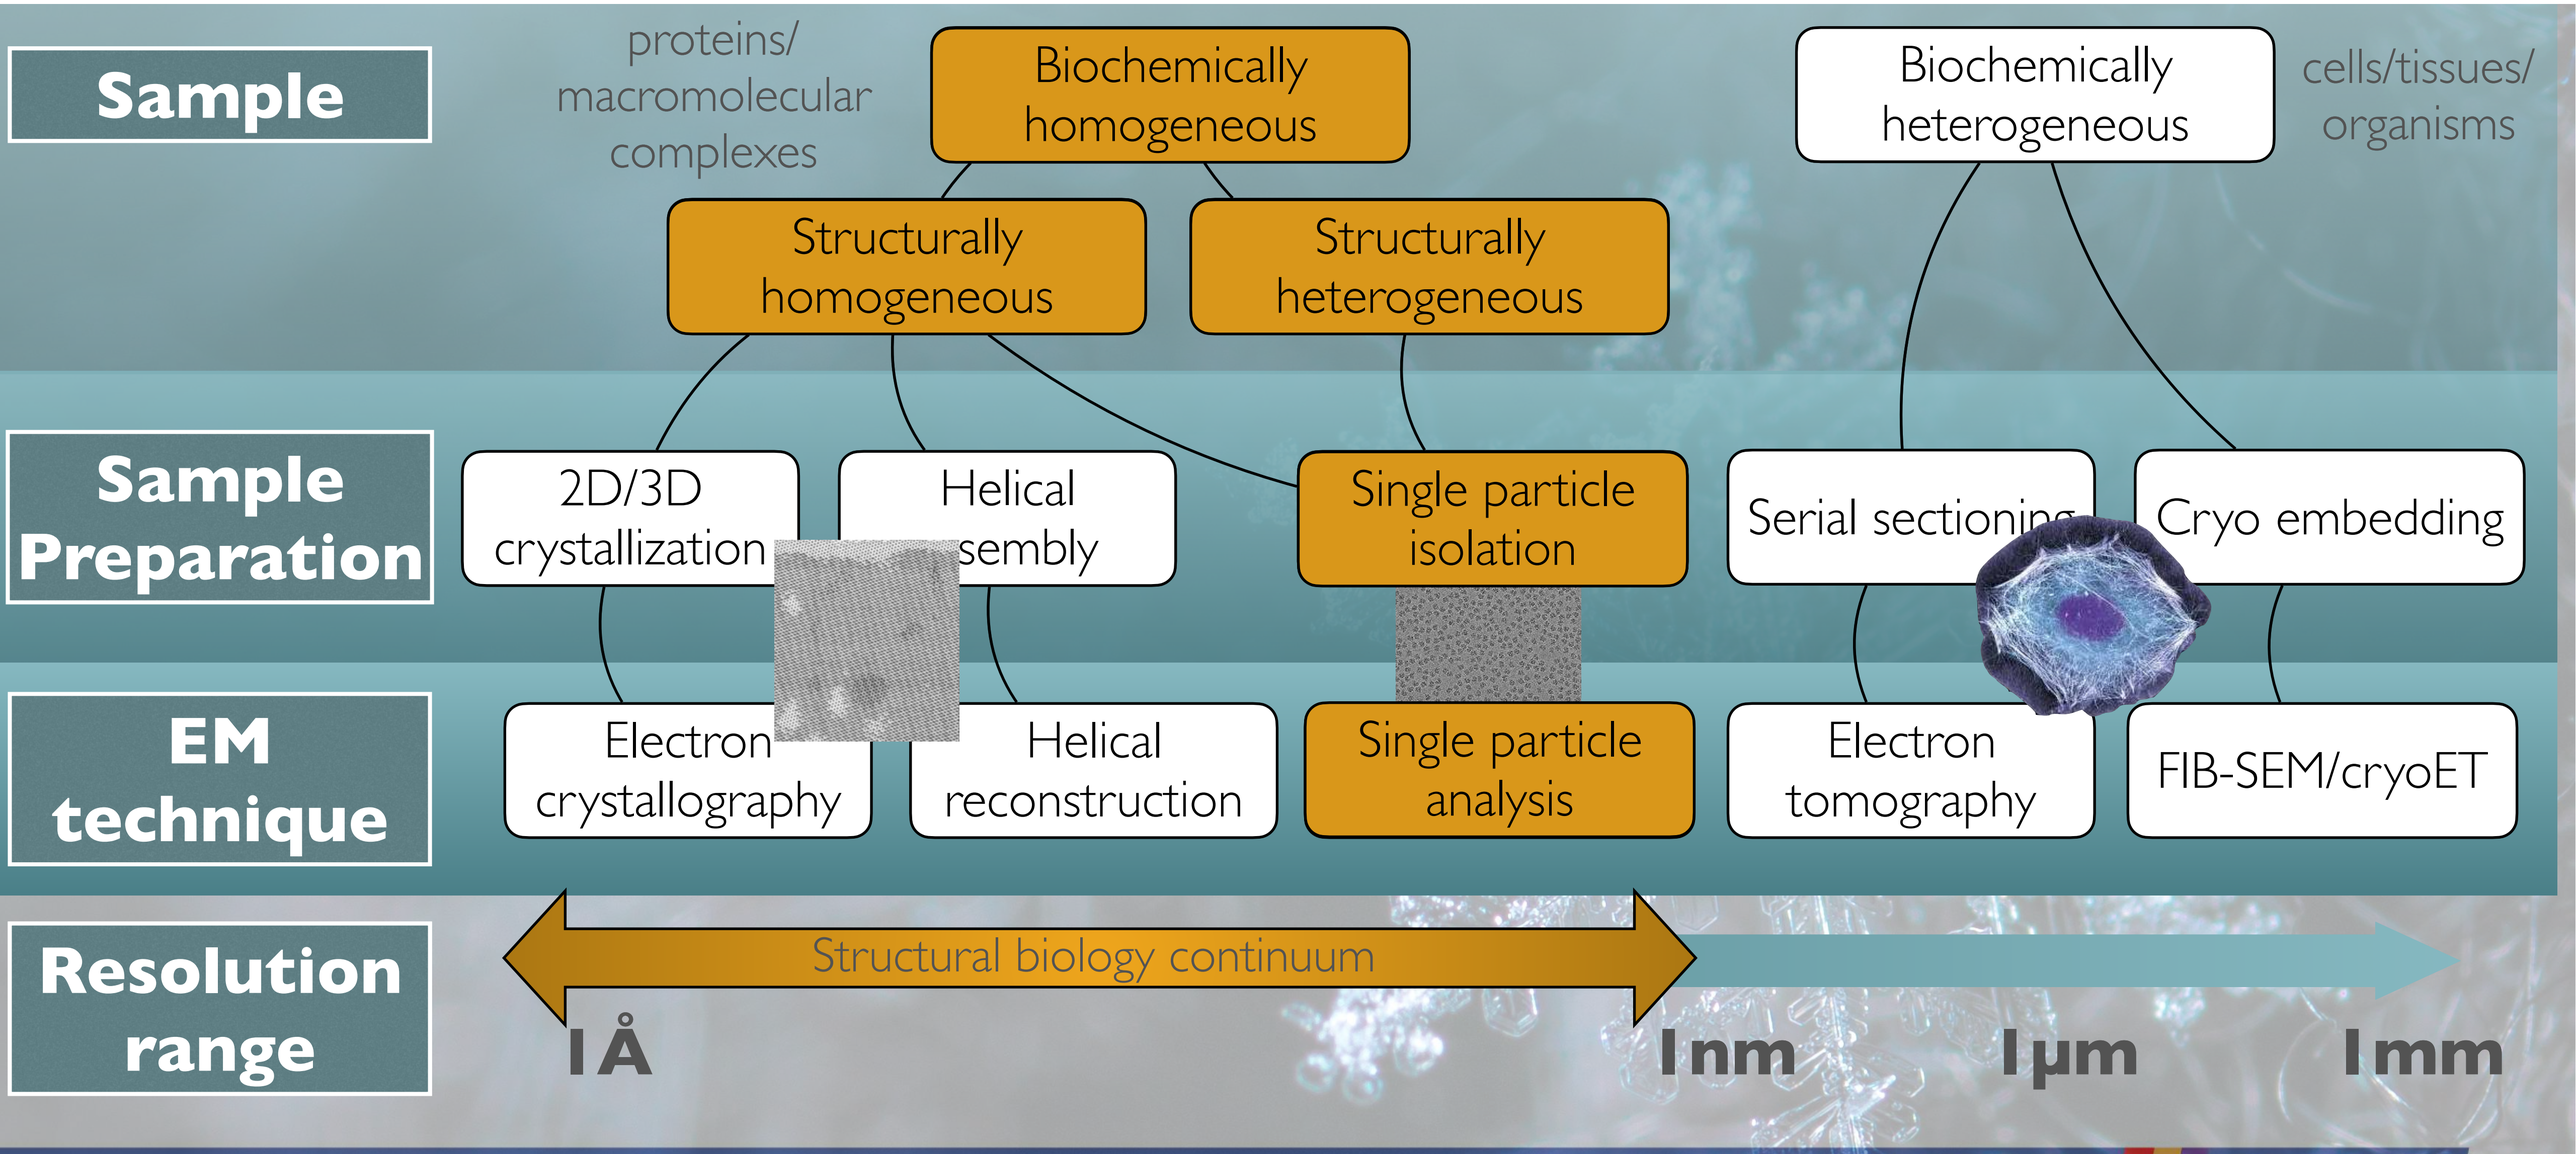


Nakane, et al. Single-particle cryo-EM at atomic resolution. Nature (2020).

How are samples prepared for cryoEM?

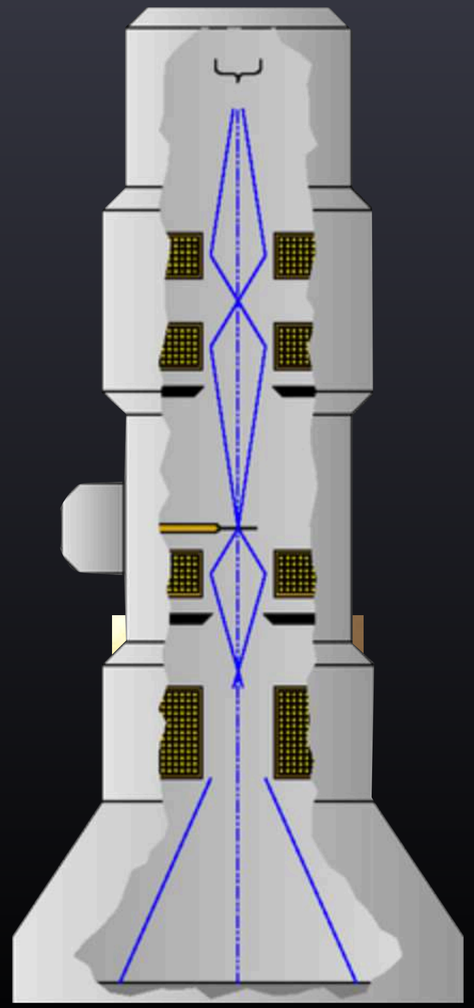


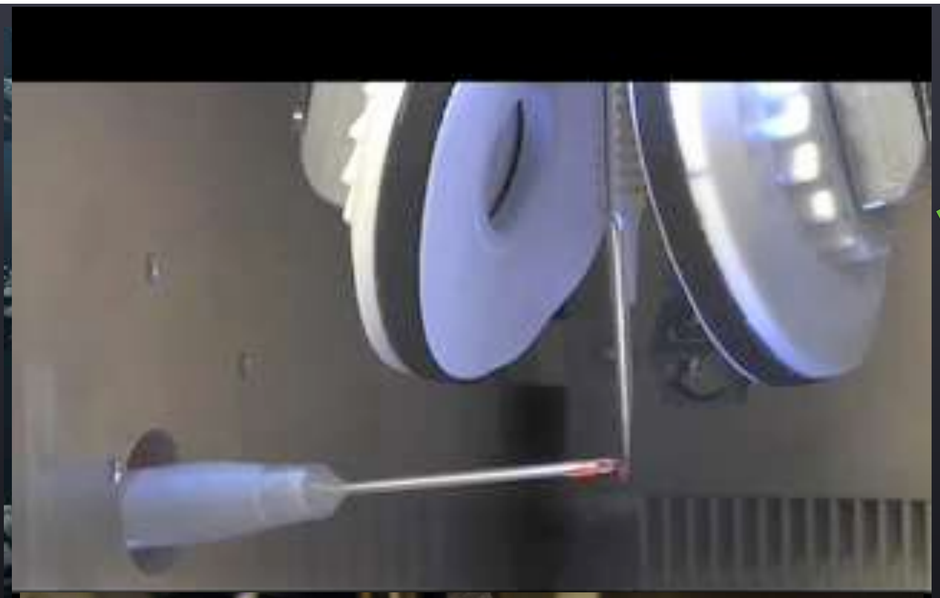
How are samples prepared for cryoEM?



How are samples prepared for cryoEM?

Vitrifying a biological sample



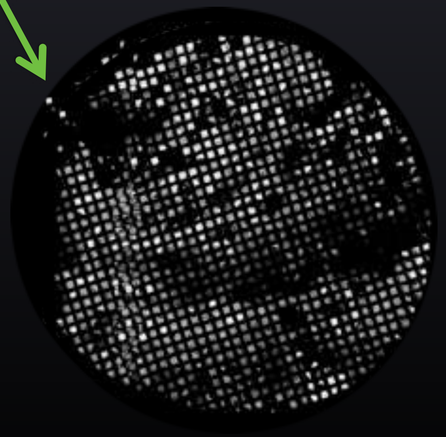


>99.999%

<0.001%

~3µl

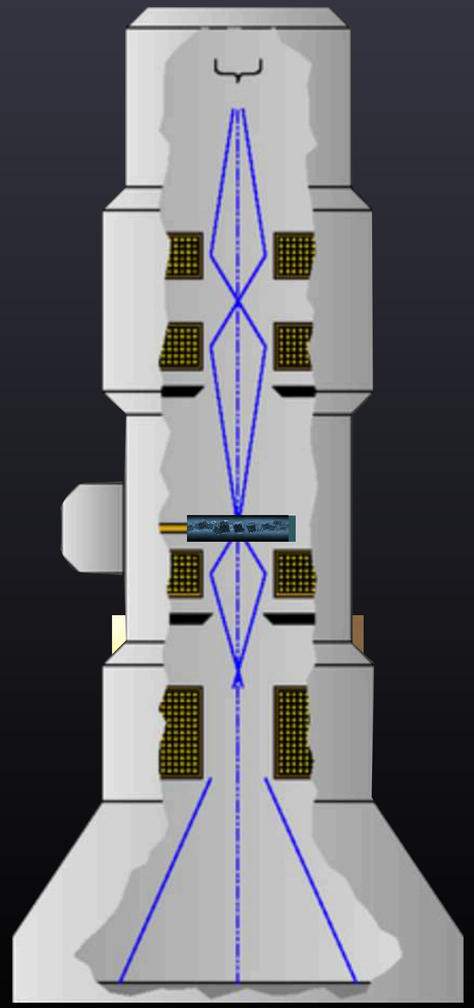
<3nl

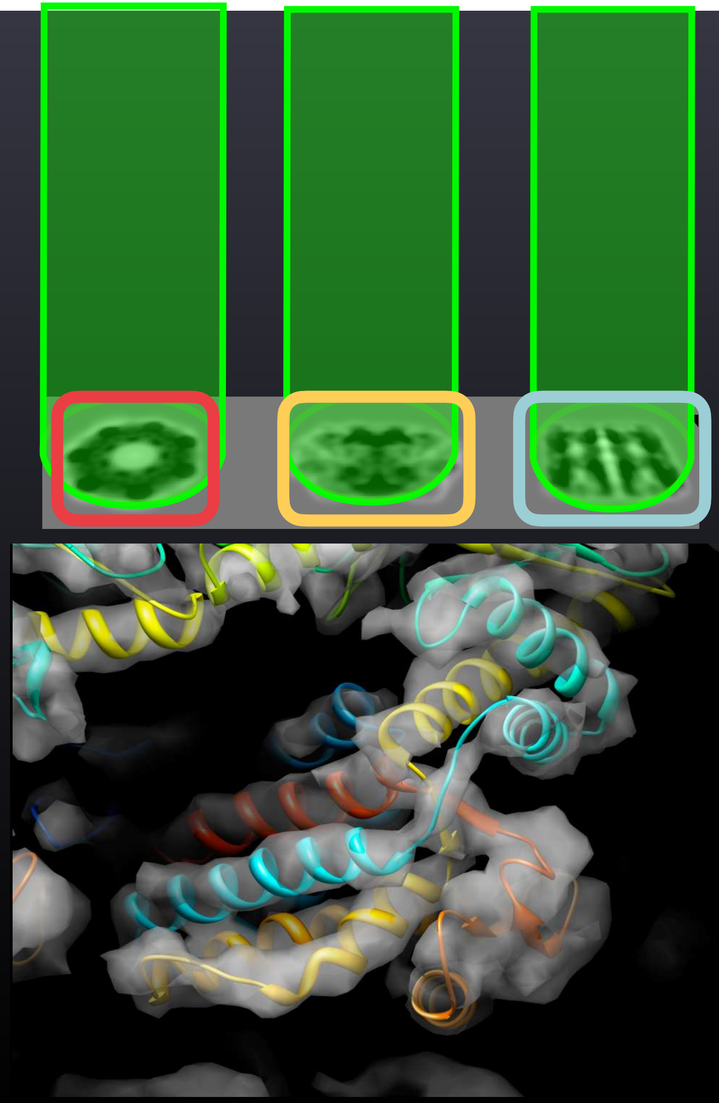


>100,000 potential imaging targets; most of them are not usable.

How are samples prepared for cryoEM?

Vitrifying a biological sample

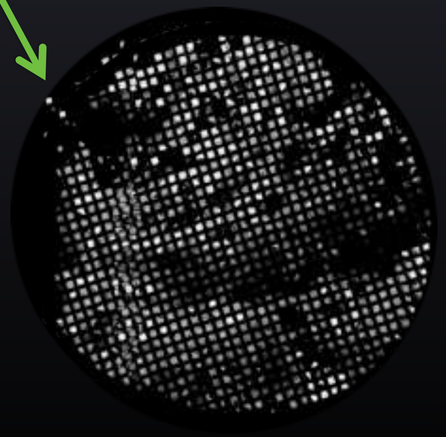




>99.999%

<0.001%

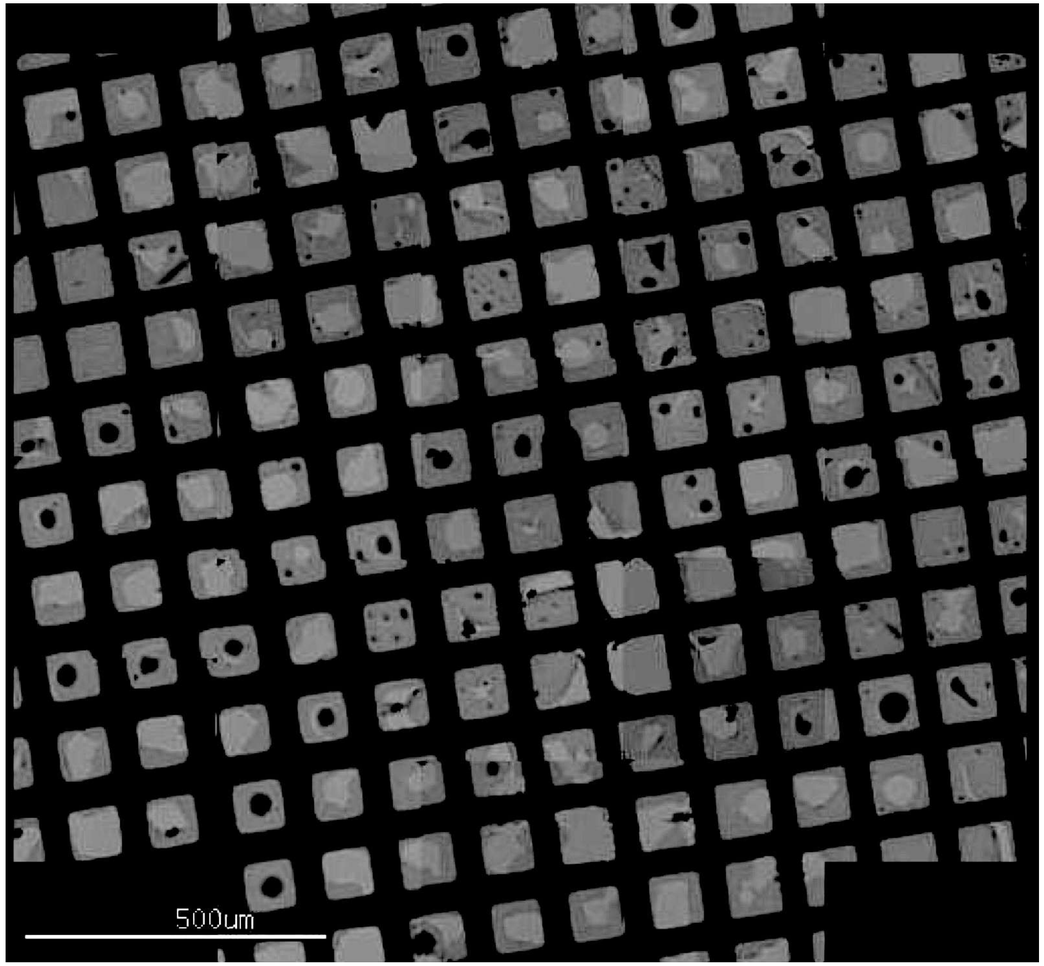
~3µl

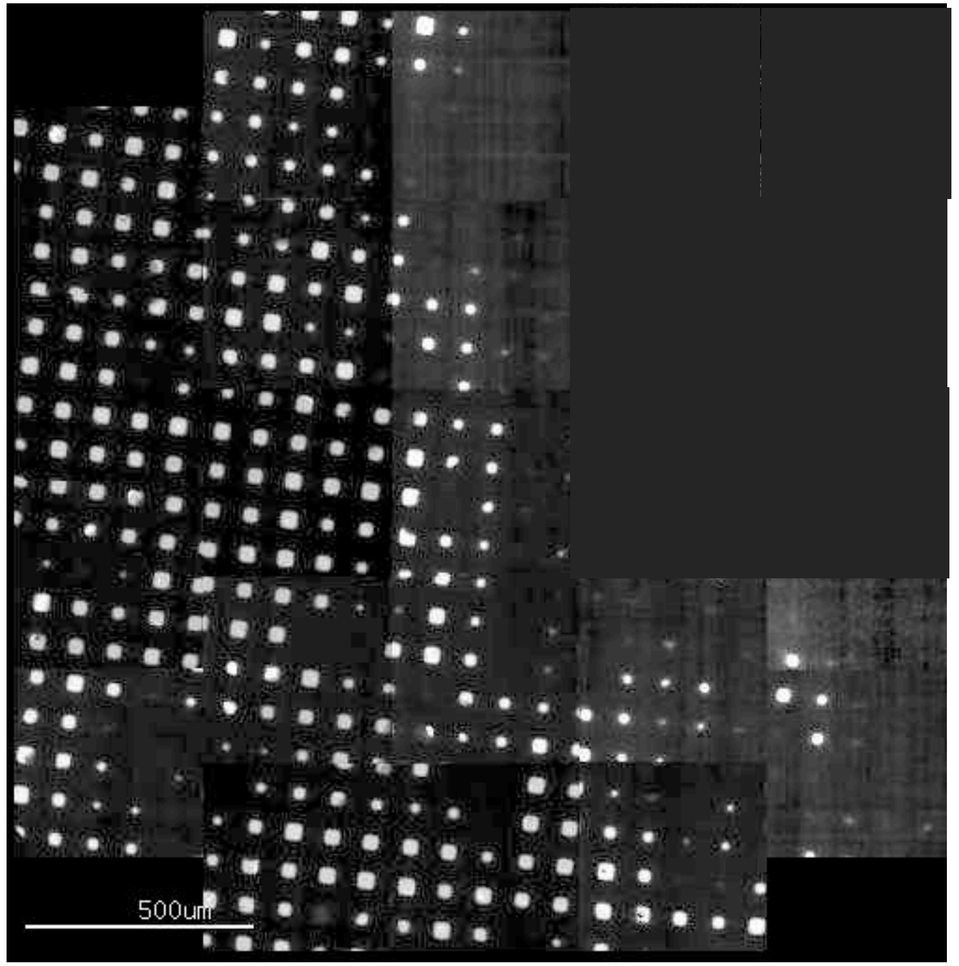


<3nl

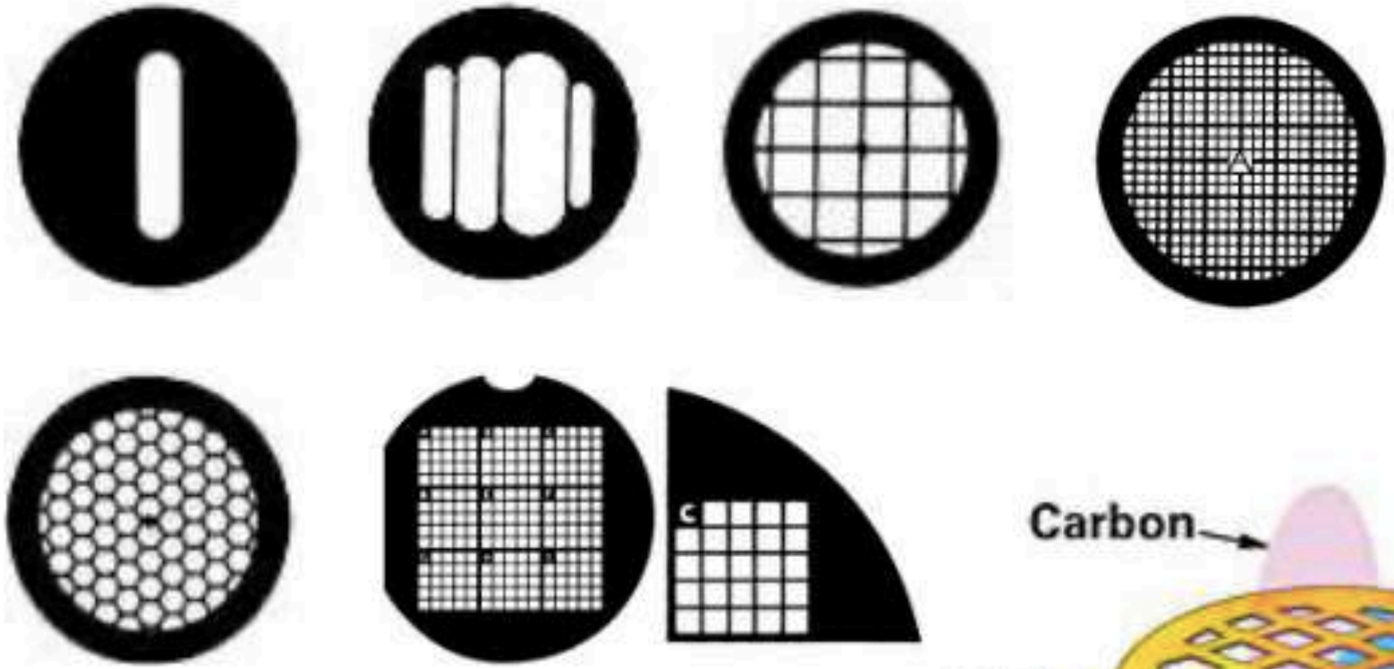
>100,000 potential imaging targets; most of them are not usable.

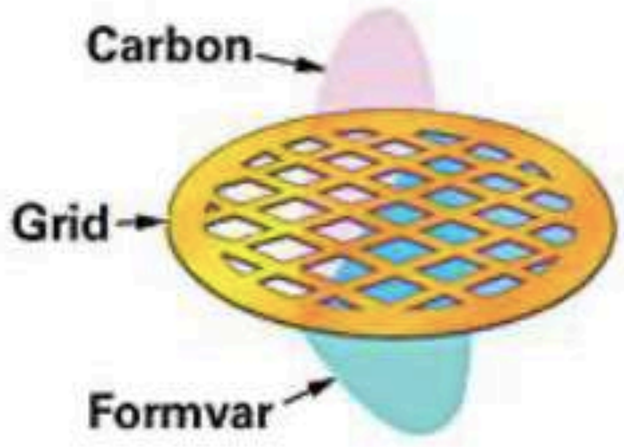
What do EM grids look like?





What do EM grids look like?





Common Materials

Copper

Nickel

Gold

Aluminum

Molybdenum

Titanium

Stainless Steel

What do EM grids look like?

Rough grid parameters

Rim Width: 350-400µm.

Thickness: approximately 25µm thick.

Diameter: 3.0 to 3.05mm

Pitch: Is 1"/mesh or 25.4mm/mesh

Example 200 mesh pitch = 25.4/200 = 127µm

PELCO® Grid Size

Square Mesh	Pitch µm	Hole µm	Bar µm	% Trans-mission		
50		508		425	83	70
75		339		284	55	70
100		254		204	50	65
150		169		125	44	60
200		127		90	37	50
300		85		54	31	40
400		64		38	26	35
500		51		28	23	30

What do EM grids look like?

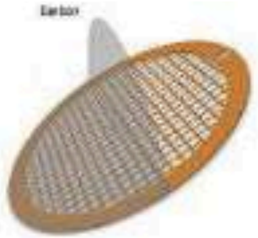
TERMINOLOGY

Grid (Cu, Au, Mo, etc…)

- mesh

Foil (C, Au, etc…)

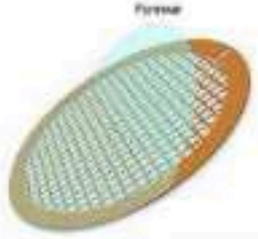
- Continuous
- lacy
- holey (hole size and spacing)



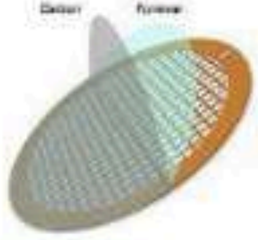
CARBON ONLY SUPPORT FILMS

HOLEY CARBON SUPPORT FILMS

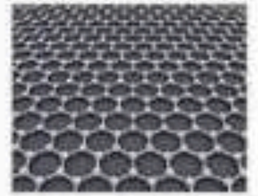
LACEY CARBON SUPPORT FILMS



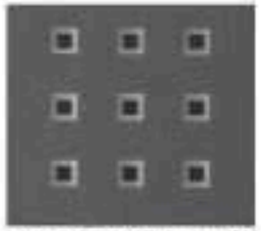
FORMVAR ONLY SUPPORT FILMS



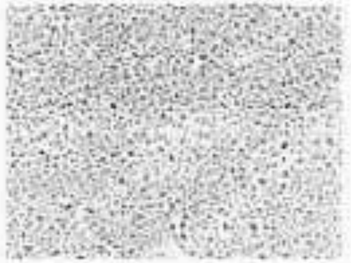
FORMVAR / CARBON SUPPORT FILMS



EM-TEC GRAPHENE SUPPORT FILMS



EM-TEC SILICON NITRIDE SUPPORT FILMS



TEM CALIBRATION & TEST STANDARDS

What do EM grids look like?

TERMINOLOGY

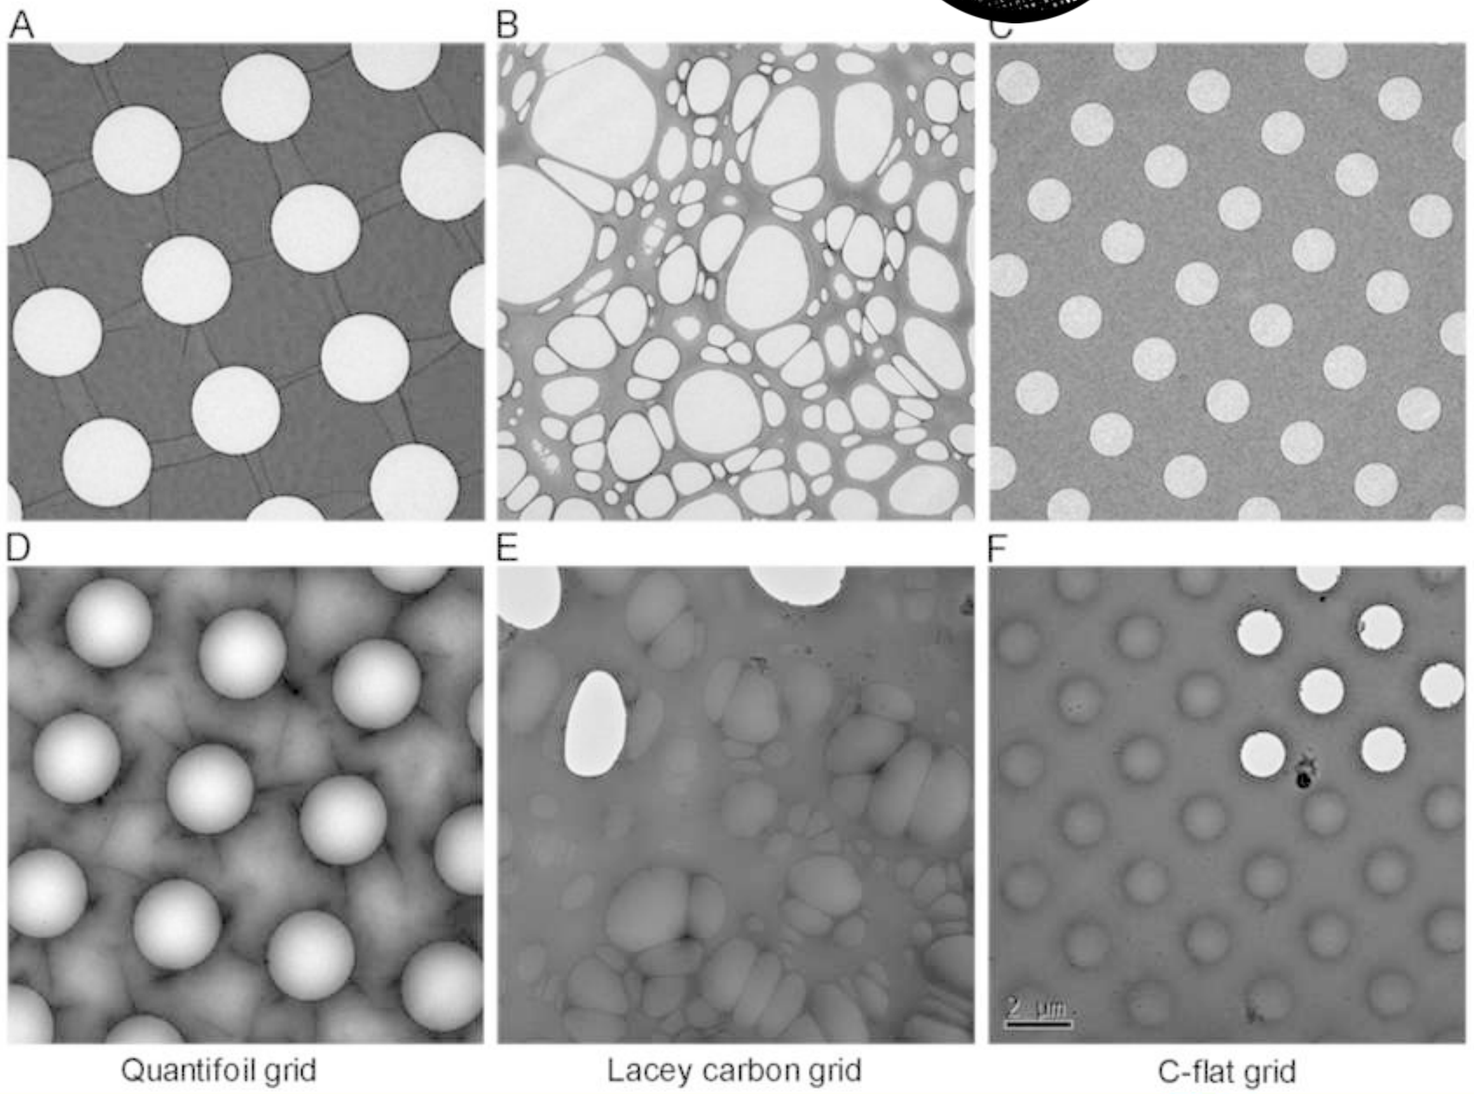
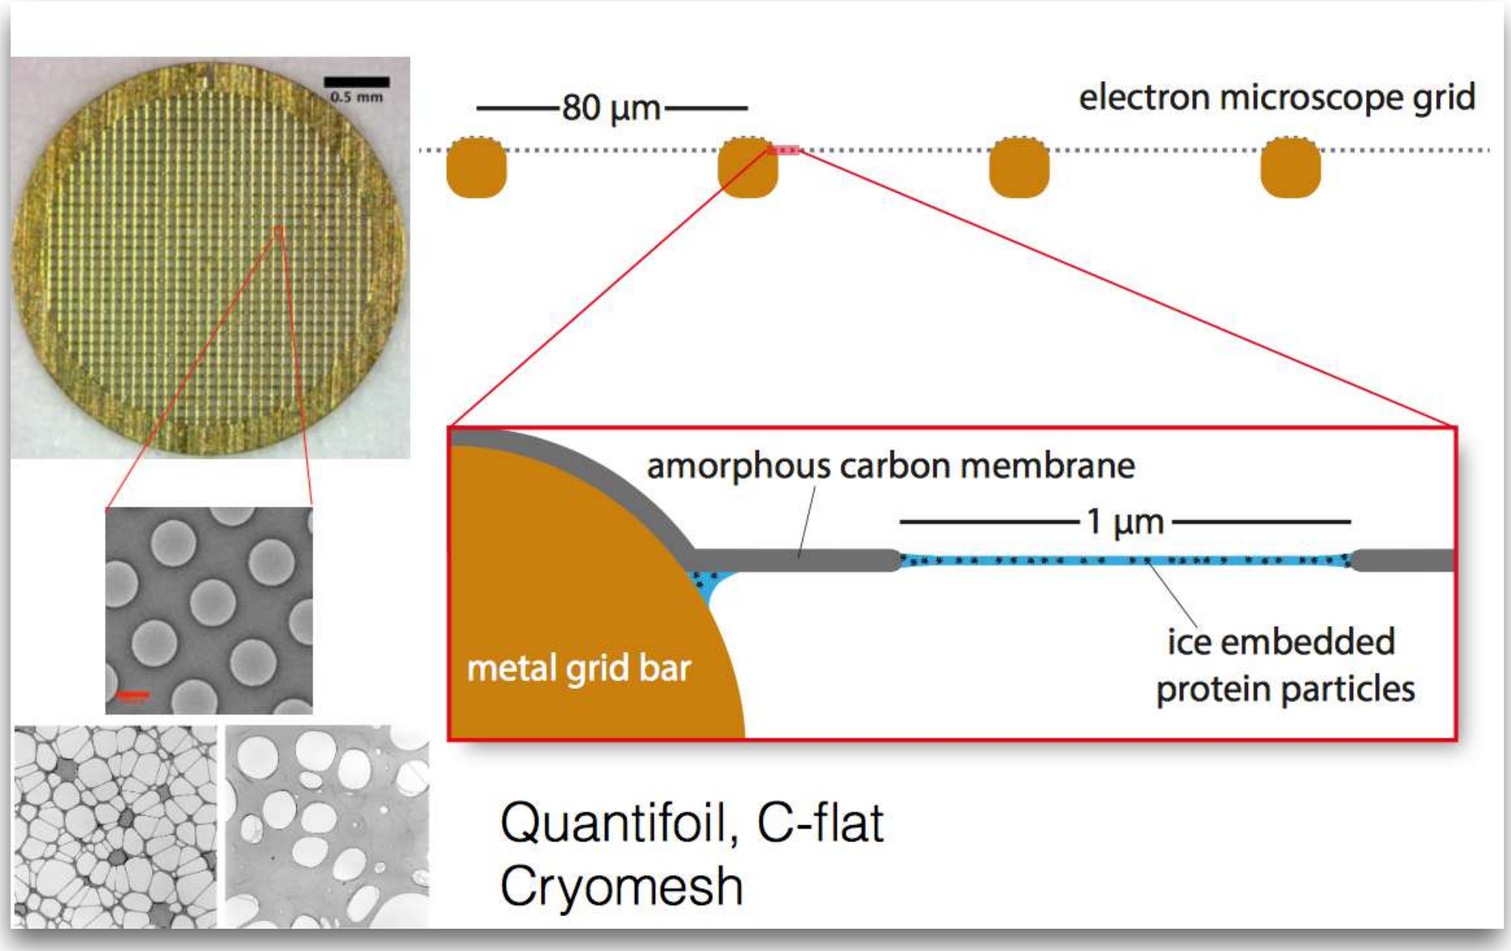
Cho, Hye-Jin & Hyun, Jae-Kyung & Kim, Jin-Gyu & Jeong, Hyeong & Park, Hyo & You, Dong-Ju & Jung, Hyun. (2013). Measurement of ice thickness on vitreous ice embedded cryo-EM grids: investigation of optimizing condition for visualizing macromolecules. Journal of Analytical Science and Technology. 4. 10.1186/2093-3371-4-7.



What do EM grids look like?

TERMINOLOGY



Russo & Passmore, 2015

What do EM grids look like?

TERMINOLOGY

- Holey gold foil on gold mesh grid

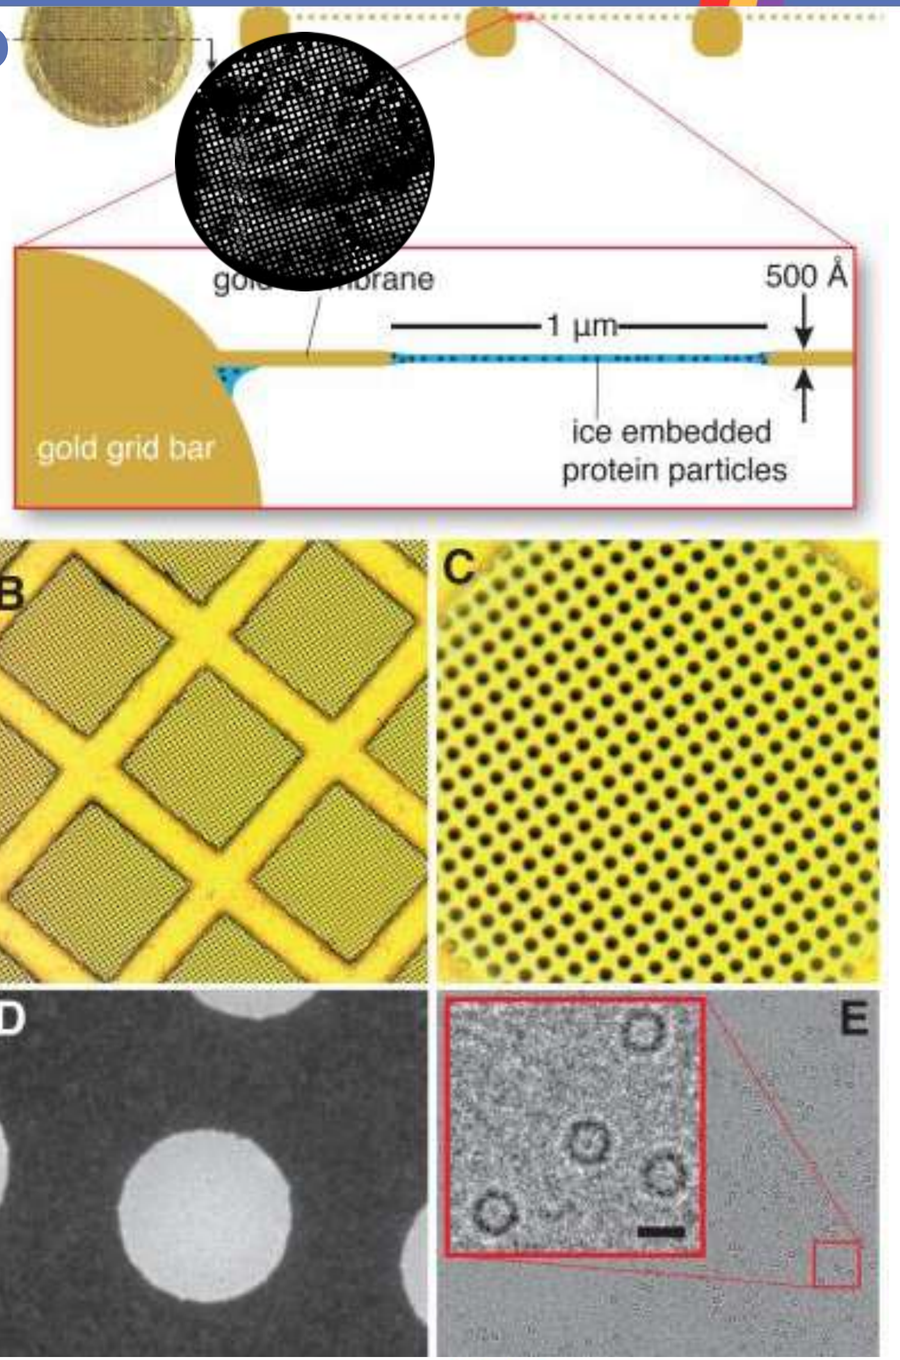
Advantages:

- Prevents differential thermal contraction when freezing
- Reduces beam-induced specimen movement
- Combined with direct detector technology allows for near atomic resolution

Disadvantages:

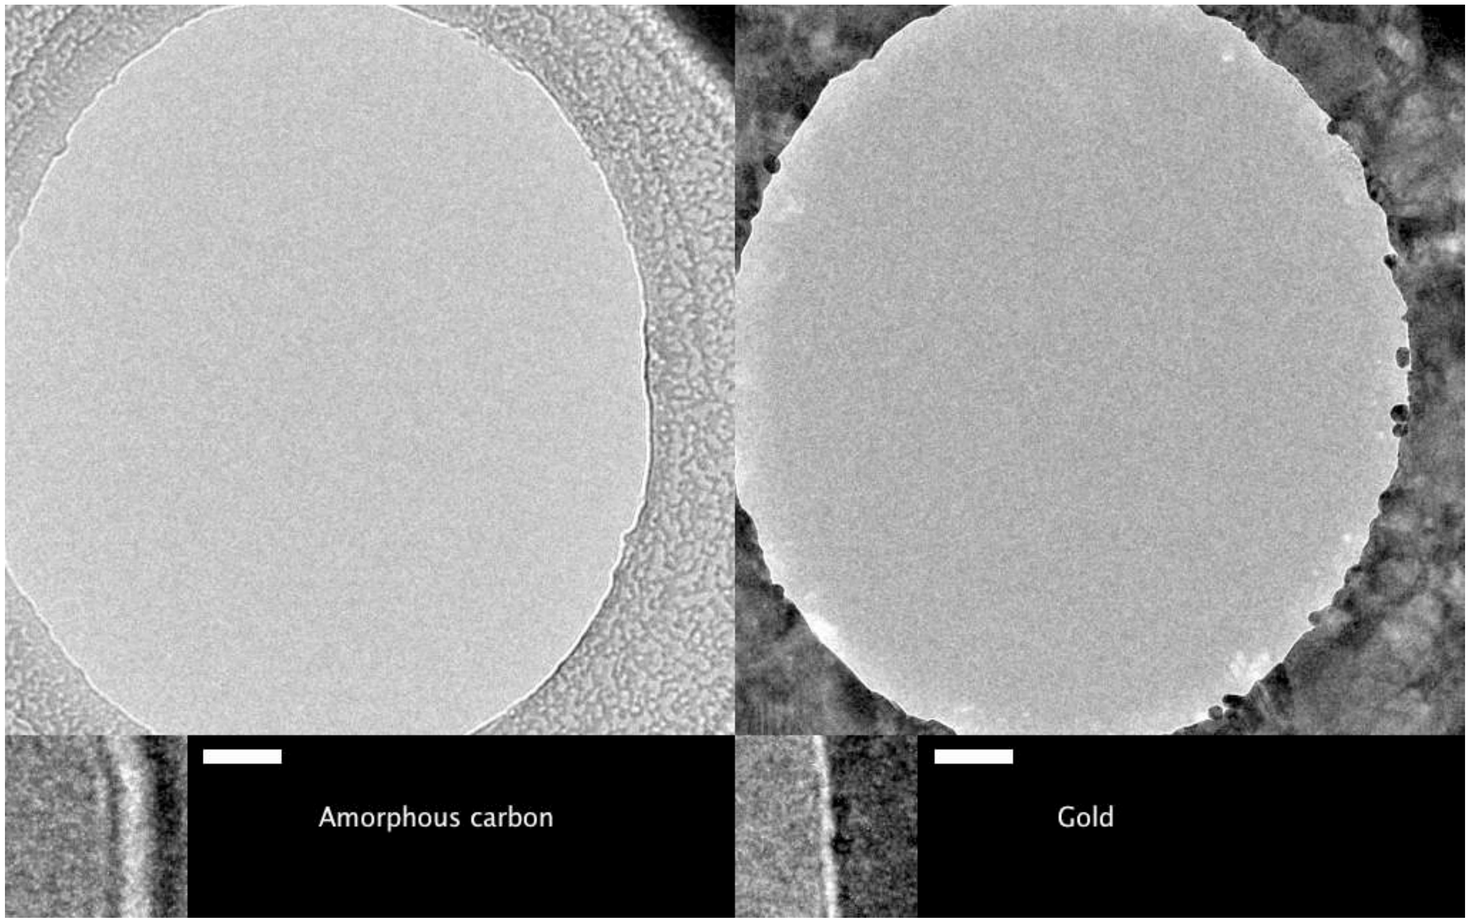
- Difficult to find focus due to lack of amorphous substrate

Russo & Passmore, 2015



What do EM grids look like?

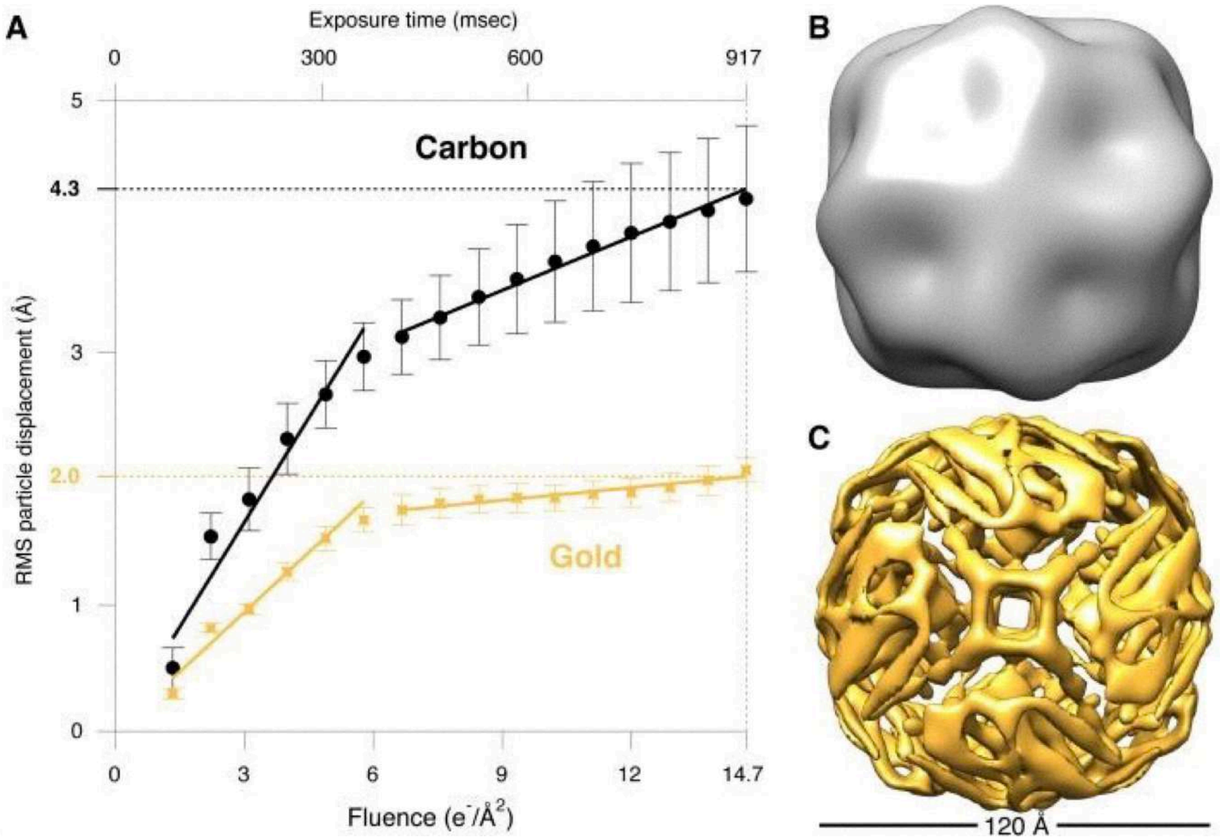
Gold grids



Russo & Passmore, 2015

What do EM grids look like?

Gold grids



A. 80S ribosome movement during irradiation supported by amorphous carbon and gold using same imaging conditions.

Apoferritin density maps using same imaging conditions and identical processing for **B.** carbon and **C.** gold substrates. **B.** is at 25 Å and **C.** 8 Å resolution.

Russo & Passmore, 2015

What do EM grids look like?

Gold grids

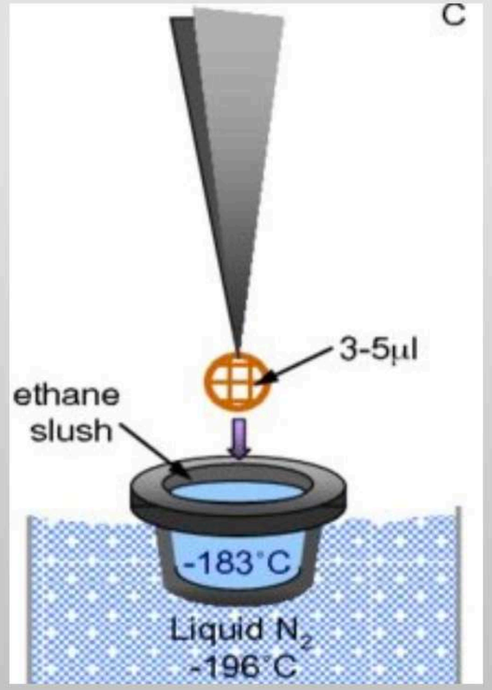
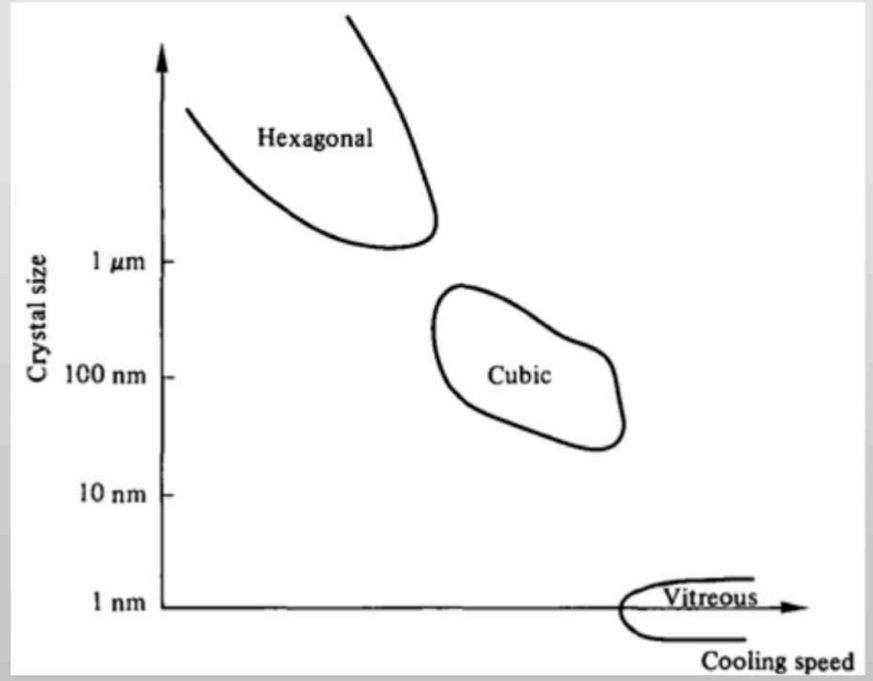
How are samples prepared for cryoEM?

Vitrification process

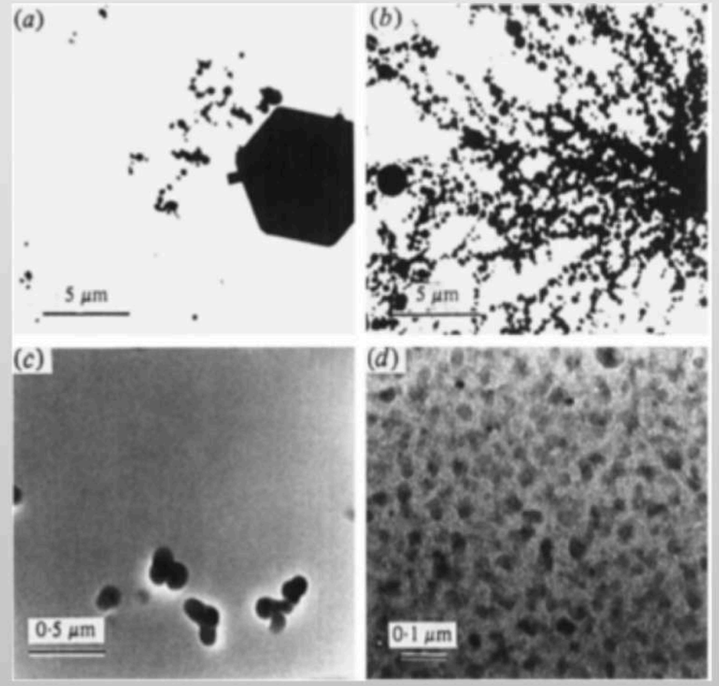
- Liquid ethane is a suitable coolant.
- Liquid nitrogen boils on contact, which makes it a poor coolant for cryo-EM.
- Cooling speed faster than 10^5-10^6 K/s ensure the formation of vitrified ice.



Setup of liquid ethane
(Image from Wen Jiang)



Cooling speed &
forms of ice

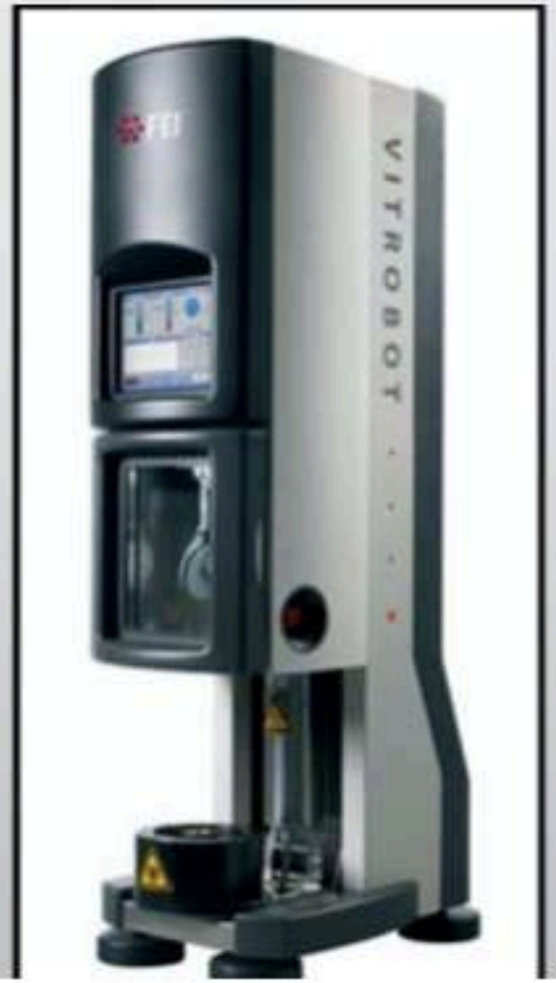


Different forms of ice contamination

Jacques Dubochet et al., 1988

How are samples prepared for cryoEM?

Vitrification process



What happens to samples during vitrification?

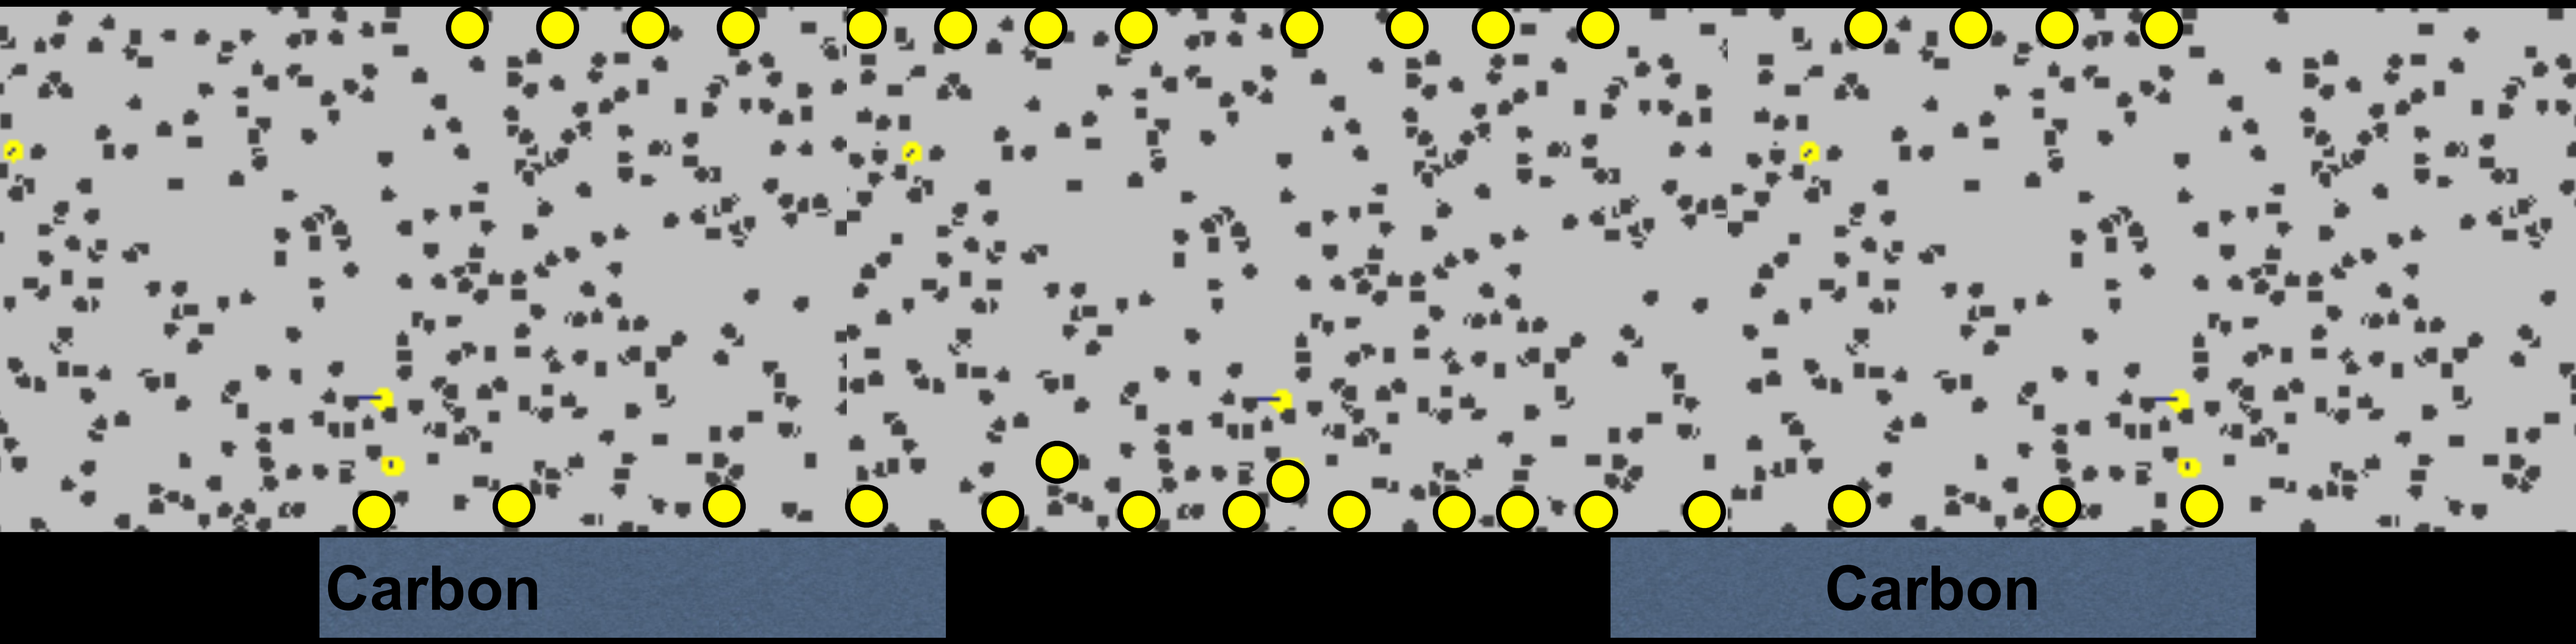
A hypothetical scenario during cryoEM grid preparation



http://weelookang.blogspot.com/2010/06/ejs-open-source-brownian-motion-gas.html

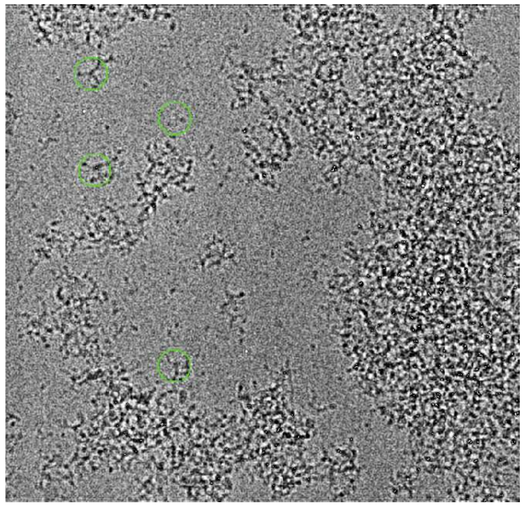
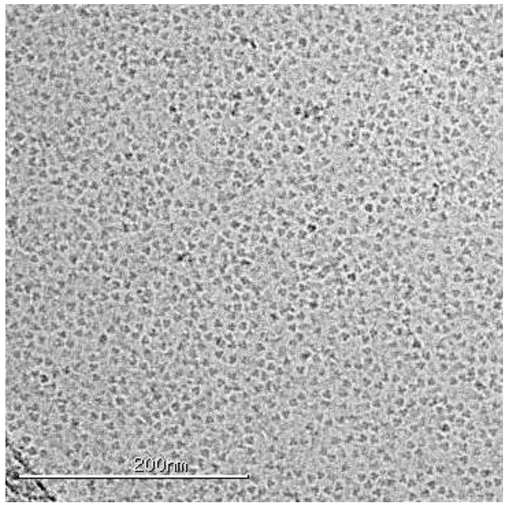
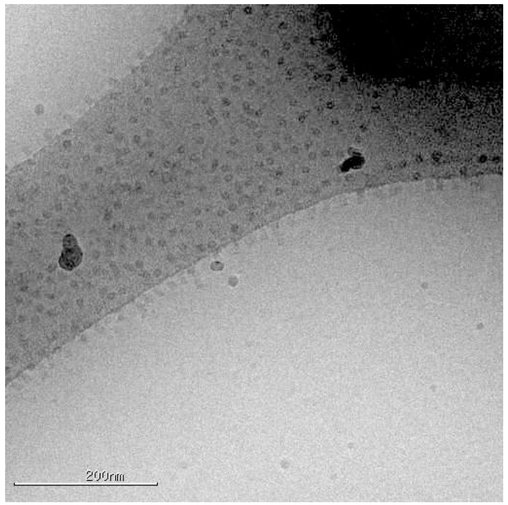
What issues arise?



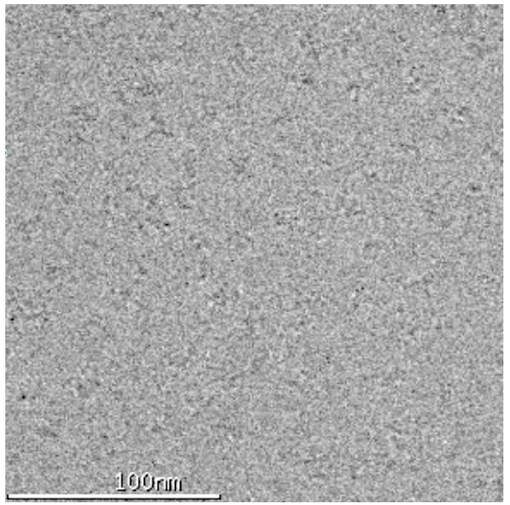
Aggregating in ice



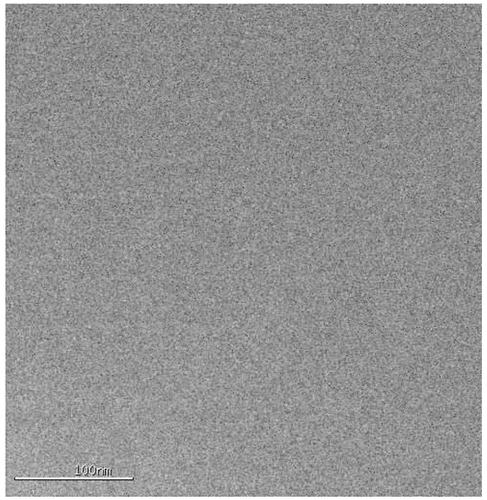
Preferred orientation



Particles not going into holes

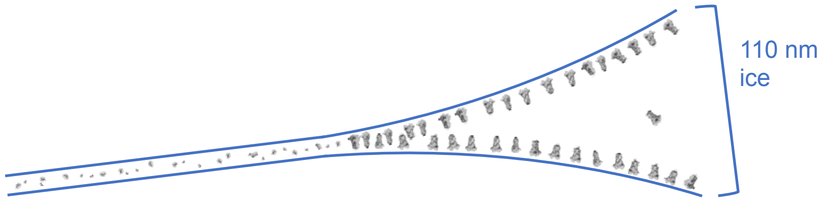


Rejecting 90% of particles



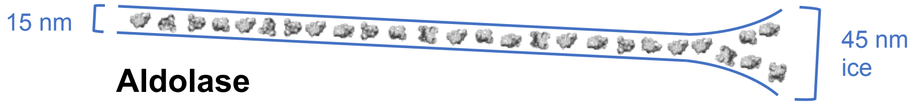
Particles disappearing in ice

What issues arise?

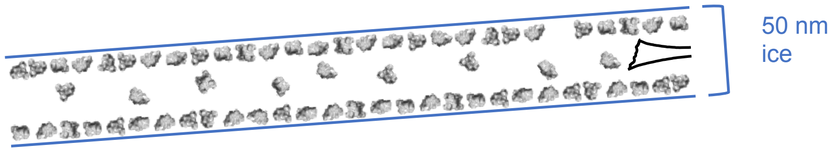


Hemagglutinin

Hemagglutinin



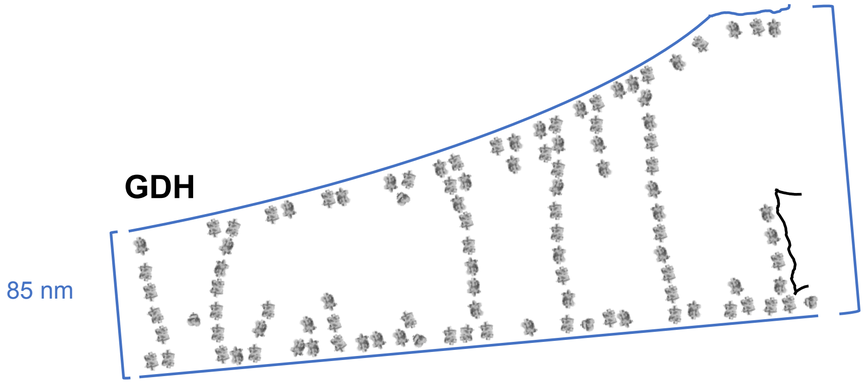
Aldolase

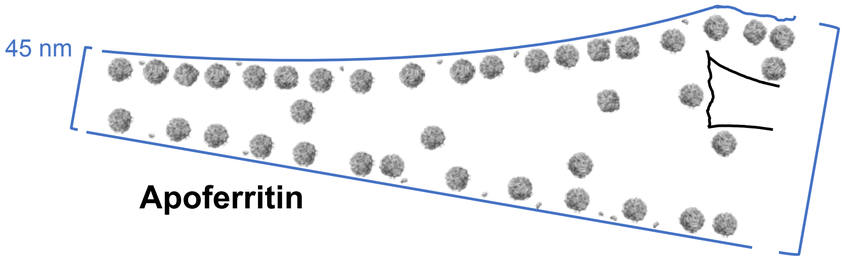


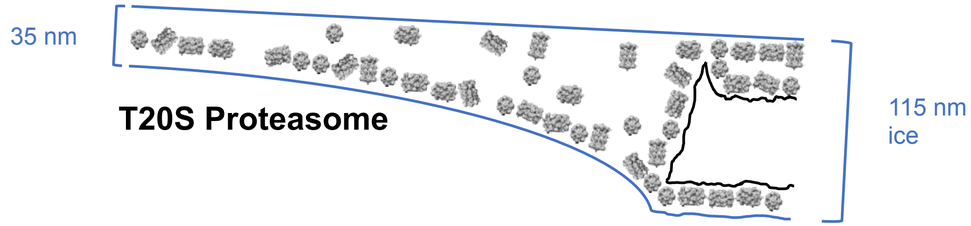
Aldolase

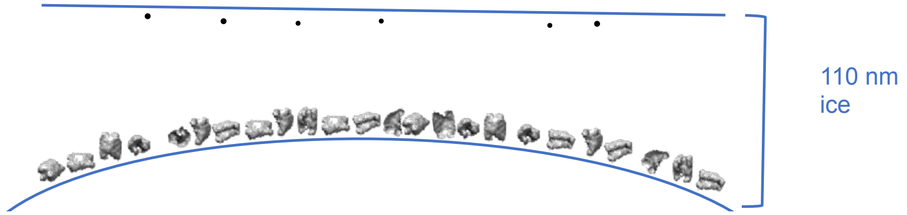
Noble AJ, et al. Routine single particle CryoEM sample and grid characterization by tomography. Elife. 2018;7.

Alex Noble









What issues arise?

Small protein

- VPP
- Thinner ice

Protein denaturation/Dissociation of protein complex

- Continuous carbon film
- Graphene oxide
- Cross-linking (GraFix)

Preferred orientation

- Tilt stage
- Cross-linking
- Detergent
- Glow-discharging conditions
- Support film (Graphene oxide)
- Image analysis (3D classification)

Flexibility

- Focused classification (subtraction)
- Multibody refinement

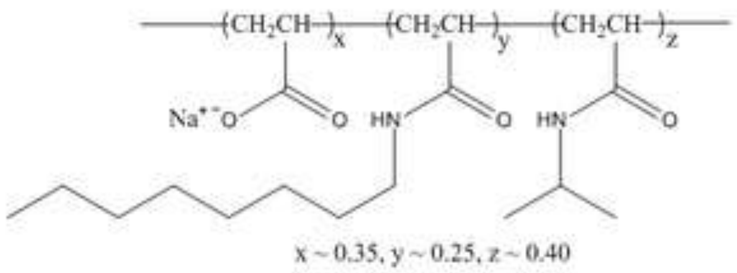
Filamentous protein

- Segmented analysis

Low concentration

- Multiple blots
- Affinity grids

Reagents for improving vitrification of Cryo-EM grids used in single particle analysis.



Molecular Formula:
(C6.2H10.3O1.35N0.65Na0.35)35

Molecular Weight:
approx. 8 kDa

CAS#: 1423685-21-5

- Amphipol A8-35
- A short amphipathic polymer that is specifically designed for membrane protein stabilization. The surfactant possesses a very high affinity for the transmembrane surfaces and allows to solubilize membrane proteins in a detergent-free aqueous solution

Reagents for improving vitrification of Cryo-EM grids used in single particle analysis.

Surfactants and Cryoprotectants	Amount	Conc.	CMC	Class
Fluorinated Octyl Maltoside (FOM)	100 µl	0.41% (w/v)	0.07% (w/v)	non-ionic detergent
Hexadecyl-trimethyl-ammonium Bromide (CTAB)	100 µl	0.34% (w/v)	0.03% (w/v)	cationic detergent
n-Decyl-ß-D-Maltoside (DM)	100 µl	0.87% (w/v)	0.09% (w/v)	non-ionic detergent
n-Decyl-α-D-Maltoside (DαM)	100 µl	0.46% (w/v)	0.08% (w/v)	non-ionic detergent
n-Dodecyl-ß-D-Maltoside (DDM)	100 µl	0.09% (w/v)	0.01% (w/v)	non-ionic detergent
Sodium Deoxycholate	100 µl	1.66% (w/v)	0.17% (w/v)	anionic detergent
Triton X-100	100 µl	0.15% (w/v)	0.01% (w/v)	non-ionic detergent
Tween 20	100 µl	1% (w/v)	0.01% (w/v)	non-ionic detergent
CHAPSO	100 µl	2.5% (w/v)	0.5% (w/v)	zwitterionic detergent
Amphipol A8-35	100 µl	5% (w/v)		anionic surfactant
Glycerol	1 ml	30% (w/v)		cryoprotectant

Preparing EM ready samples

THE OPTIMIZATION WORKFLOW

Structure determination by cryo-EM. A systematic approach to 3D structure determination is shown. In the left column, the major steps are listed. Each step should be performed successively and only after one has been completed successfully should the scientist move onto the next step. In the second column, example data are shown for ribosomes (details in text). Scale bars on the micrographs are 500 Å. Each step should be evaluated with the criteria listed in the third column, returning to earlier steps for troubleshooting.

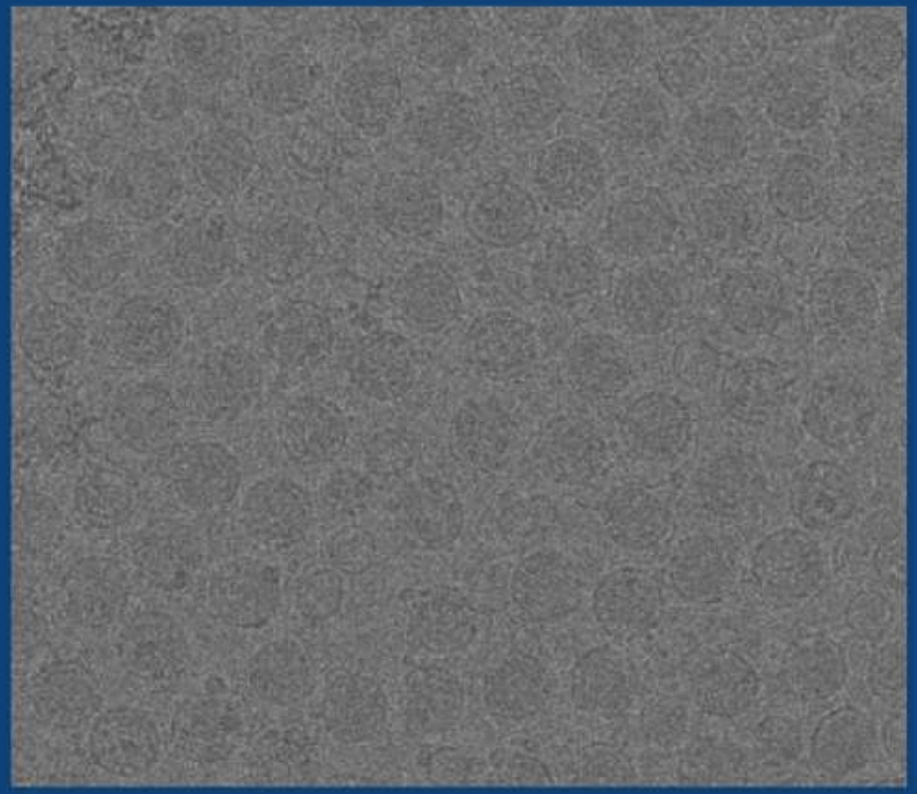
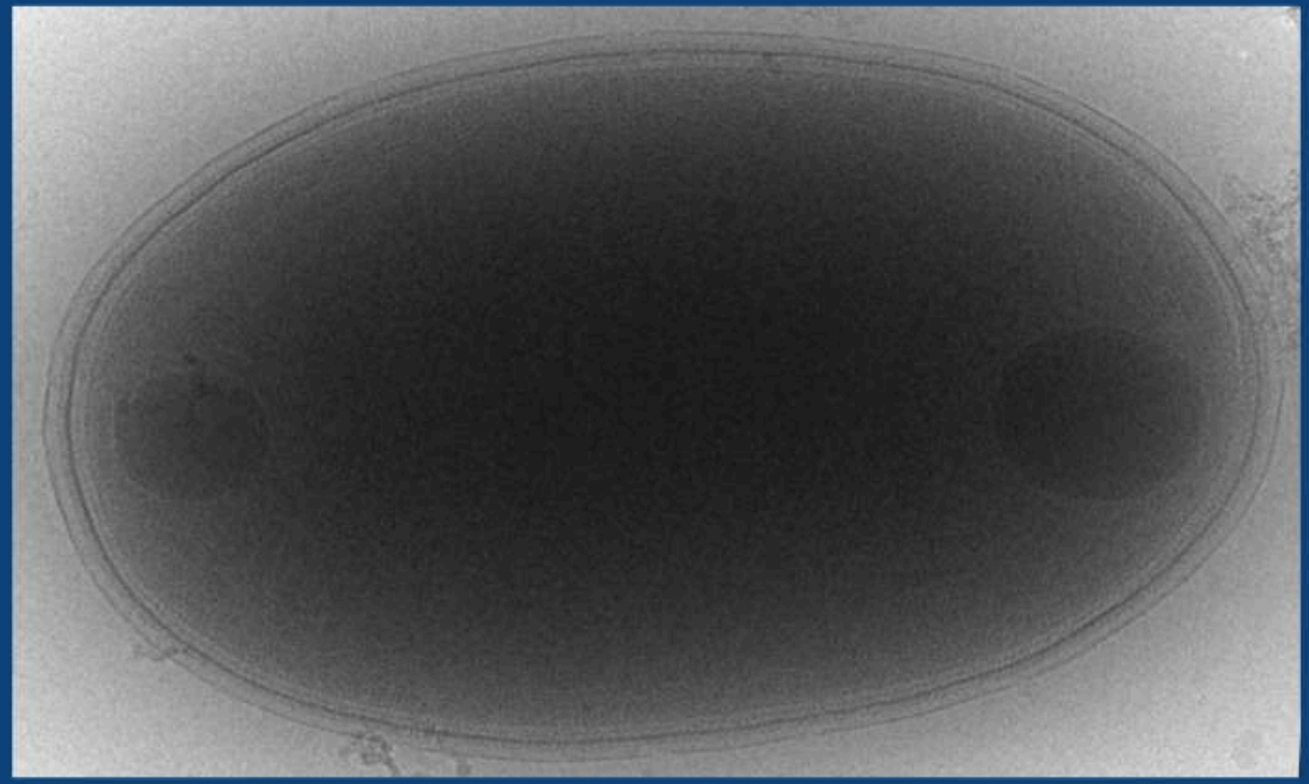
HOW THIN DOES THE SAMPLE NEED TO BE?



50 nm

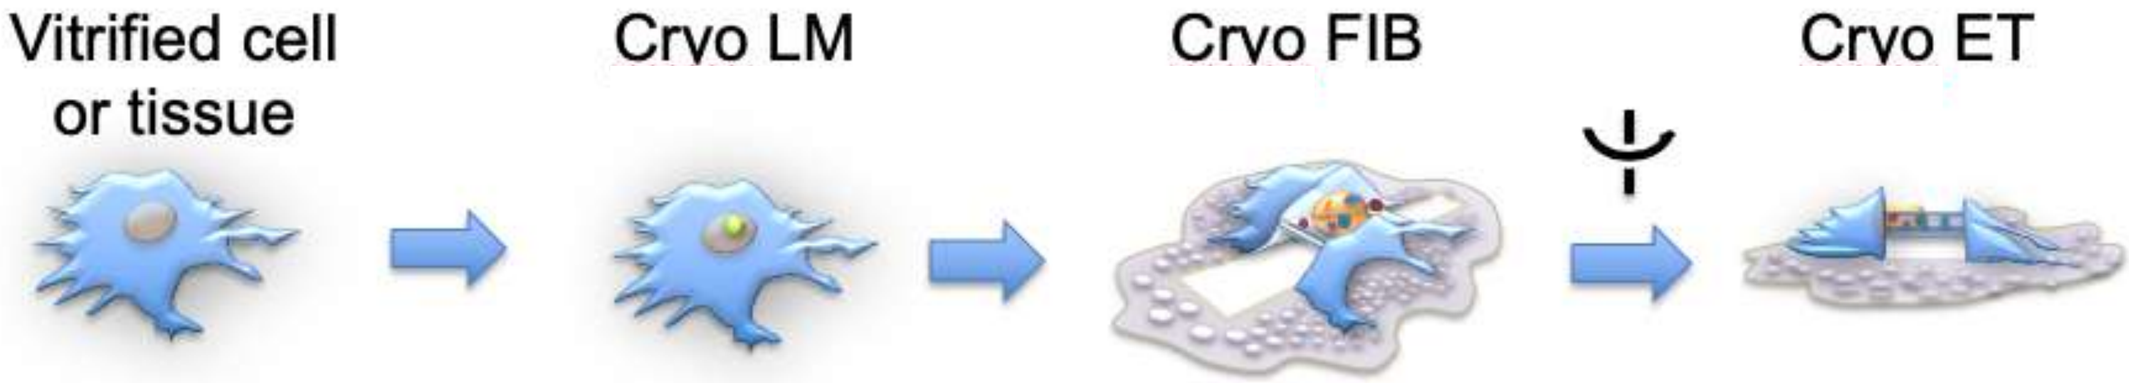
Bacteriophage (ϕ12)



E. coli, Salmonella, Cyanobacteria

How are samples prepared for cryoEM?

CLEM workflow



How are samples prepared for cryoEM?

STEP 1: Vitrify sample

Plunge Freezing

-Rapid freezing in liquid nitrogen (LN2)-cooled liquid ethane

Leica Microsystems

High Pressure Freezing (HPF)

-Rapid freezing at LN2 temps and high pressure

How are samples prepared for cryoEM?

STEP 1: Vitrify sample

Sample: cells (adherent, suspension)

SEMC Equipment: Leica EM-GP, Gatan CP3, manual plunger

Bottlenecks: sample concentration, sample buffer, preferred orientation of sample on grid, plunge freezing parameters, grid mesh, support film, warming up, ice thickness, vitrification

Takeaways

-Vitrify up to ~10 um of sample

-One-sided blotting

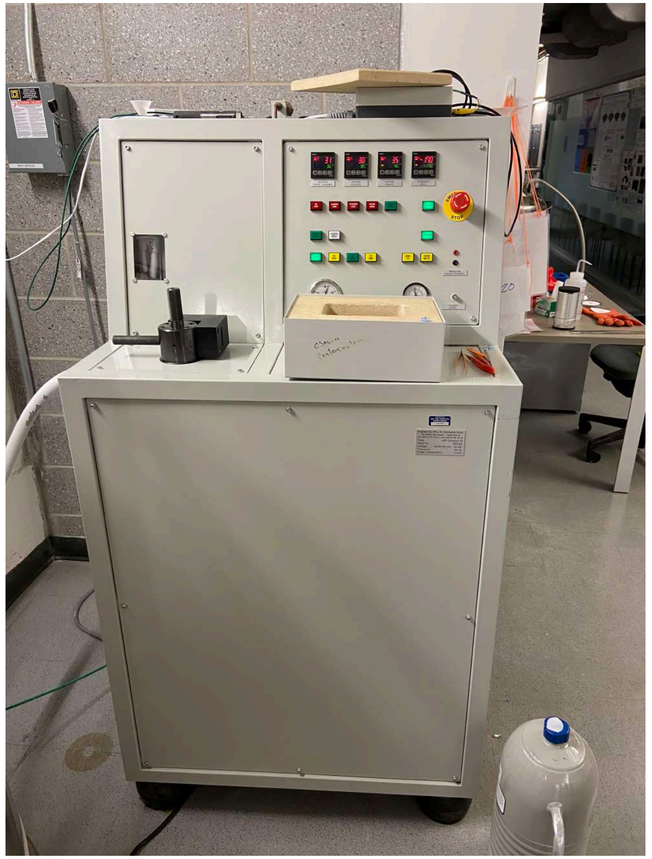
How are samples prepared for cryoEM?

STEP 1: Vitrify sample

Sample: cells, tissue

SEMC Equipment: Wohlwend HPF Compact 01

Bottlenecks: sample amount, sample concentration, sample buffer, ice thickness, warming up, pressure, vitrification



How are samples prepared for cryoEM?

STEP 2: Cryo-LM

Takeaways

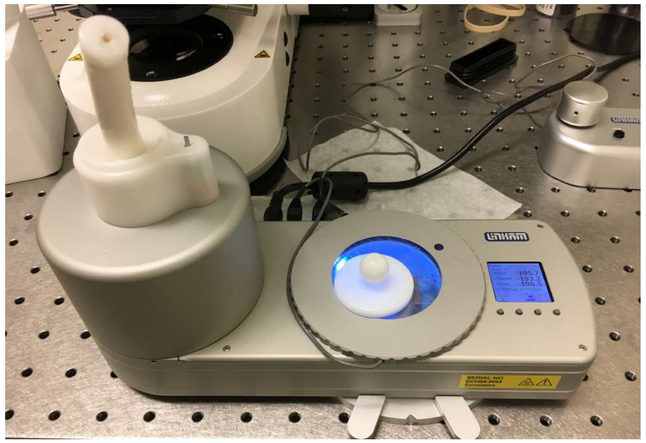
-Do I have cells? Where?

-Is my target fluorescing?

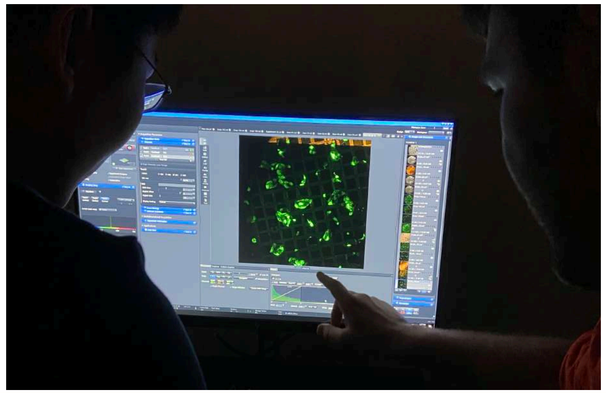
Sample: vitrified cells on bare or clipped grid

SEMC Equipment: Zeiss LSM 900 with Airyscan with Linkam Cryostage

Zeiss



Bottlenecks: sample concentration, sample location, support film, laser damage, ice thickness, autofluorescence, warming up



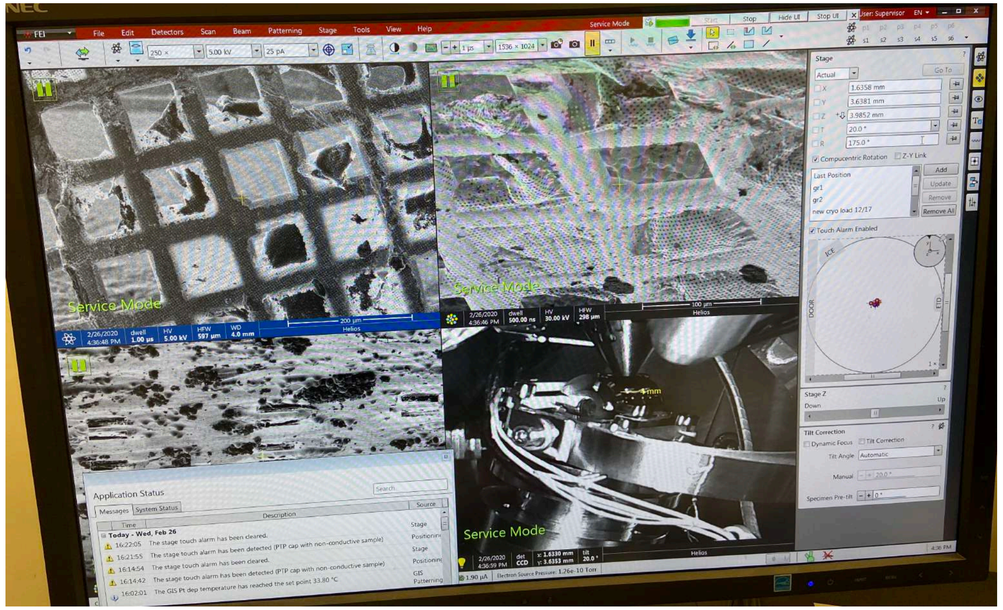
How are samples prepared for cryoEM?

STEP 3: Cryo-FIB milling

Sample: vitrified cells on a clipped grid

SEMC Equipment: Helios Nanolab G3 FIB-SEM, Leica VCT, VCM, & ACE

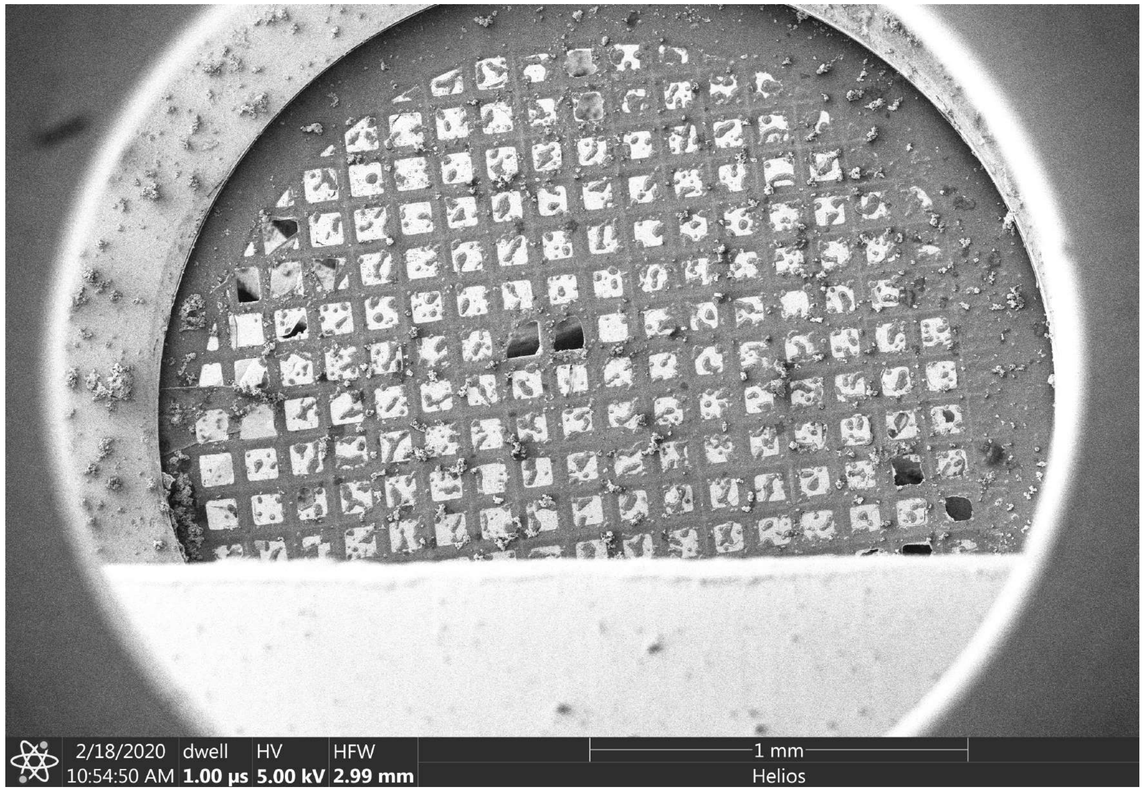
Bottlenecks: sample concentration, preferred orientation, imaging & milling parameters, grid mesh, support film, grid orientation, beam damage, charging, pole touches, dropping holder, image correlation, warming up, catching fire, …



How are samples prepared for cryoEM?

STEP 3: Cryo-FIB milling

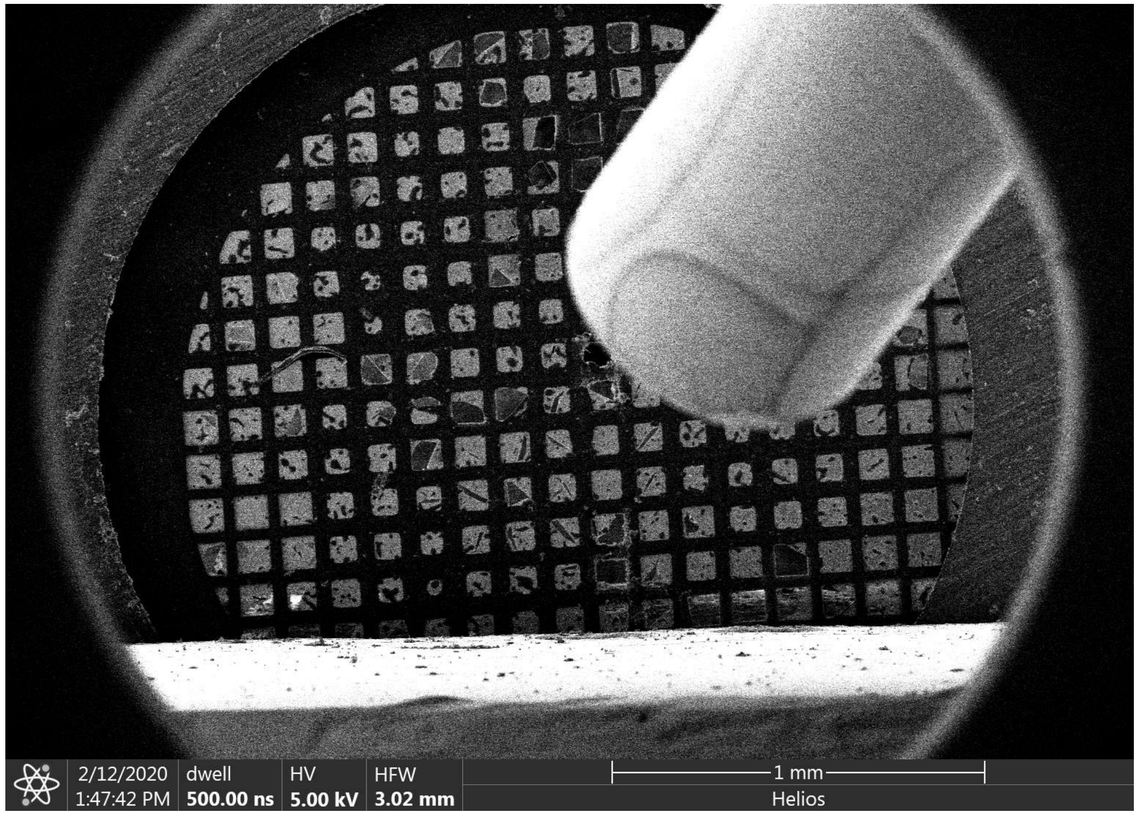
1) Grid overview/atlas images with electron and ion beam
2) GIS Platinum coat for 5 seconds
3) Mill large rectangular trenches on either side of each lamella site
4) Continue thinning lamella by milling on each side until <300 nm thickness



How are samples prepared for cryoEM?

STEP 3: Cryo-FIB milling

1) Grid overview/atlas images with electron and ion beam
2) GIS Platinum coat for 5 seconds
3) Mill large rectangular trenches on either side of each lamella site
4) Continue thinning lamella by milling on each side until <300 nm thickness



How are samples prepared for cryoEM?

STEP 3: Cryo-FIB milling

1) Grid overview/atlas images with electron and ion beam
2) GIS Platinum coat for 5 seconds
3) Mill large rectangular trenches on either side of each lamella site

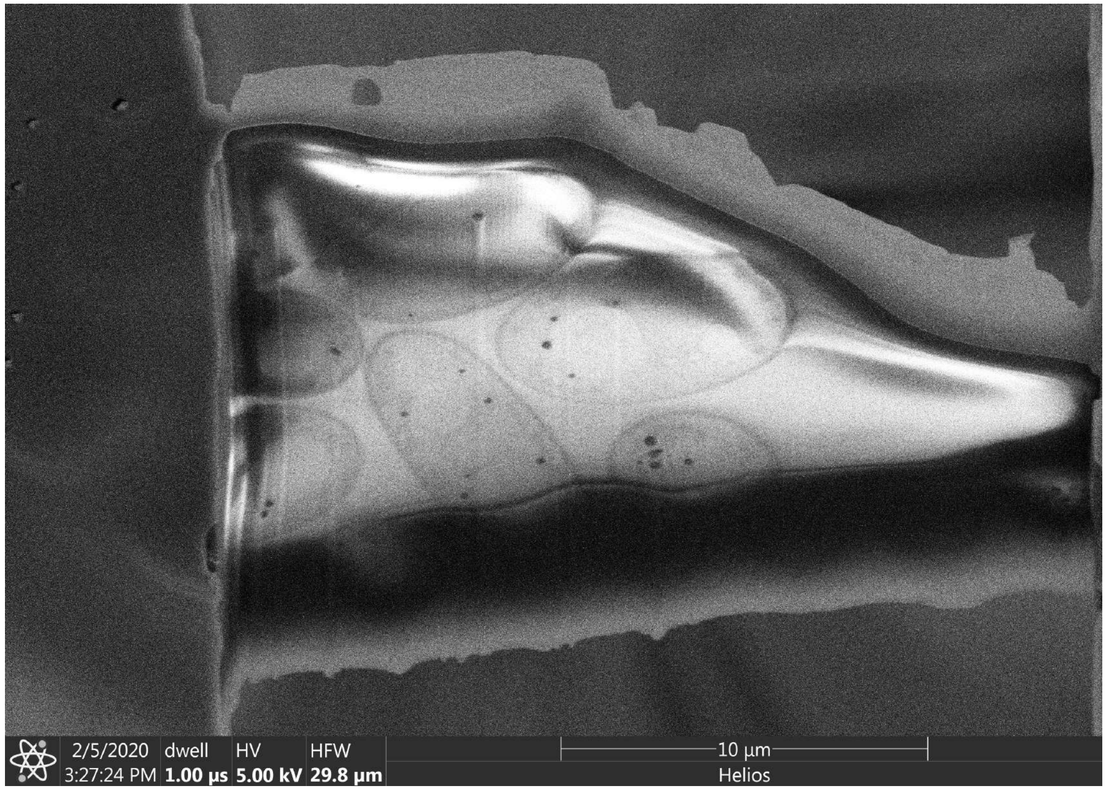
How are samples prepared for cryoEM?

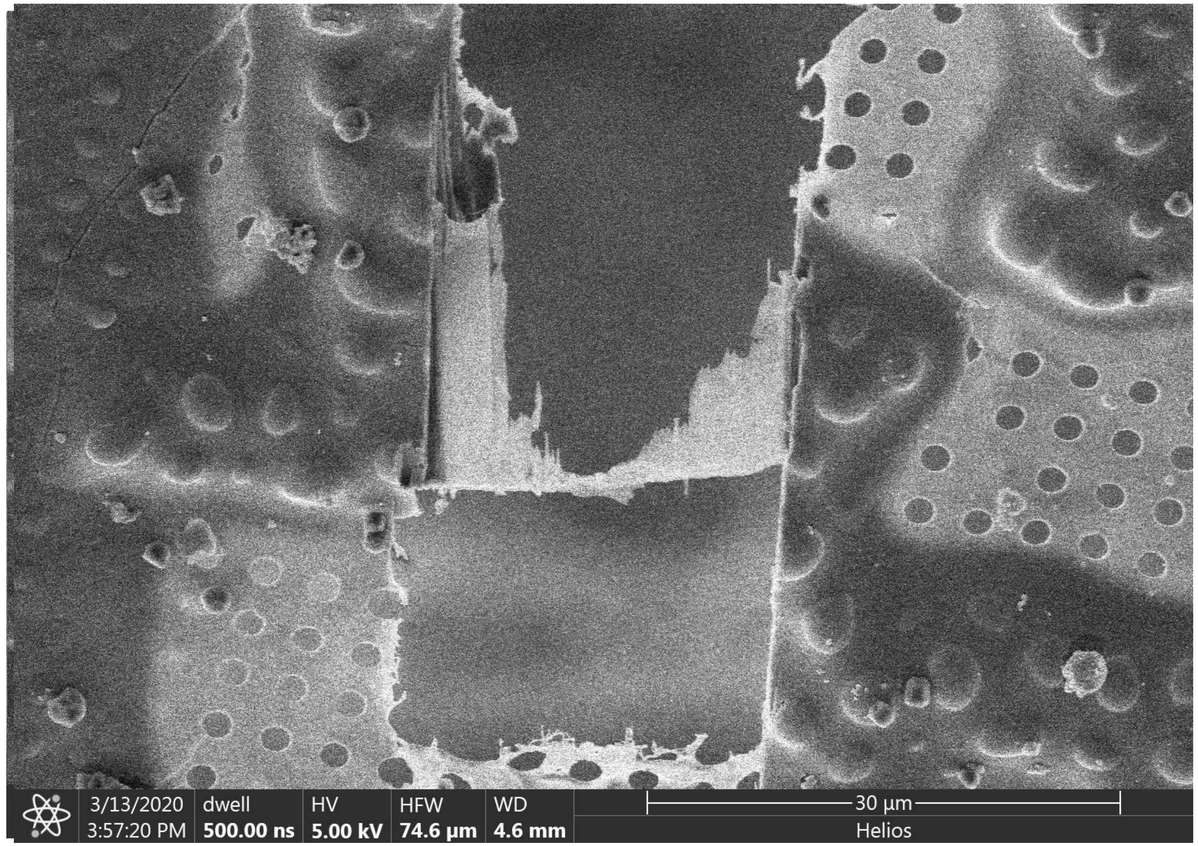
STEP 3: Cryo-FIB milling

1) Grid overview/atlas images with electron and ion beam
2) GIS Platinum coat for 5 seconds
3) Mill large rectangular trenches on either side of each lamella site
4) Continue thinning lamella by milling on each side until <300 nm thickness



How are samples prepared for cryoEM?

STEP 3: Cryo-FIB milling



Takeaways

-Large learning curve if done manually

-Many, many steps that all need to be completed successfully for experiment to work

How are samples prepared for cryoEM?

STEP 4: Cryo-ET

Sample: whole cells or lamella on clipped grid

SEMC Equipment: TFS Titan Krios 300kV TEM with Energy filter + direct detector

Bottlenecks: sample concentration, sample buffer, preferred orientation, grid mesh, grid orientation, support film, warming up, ice thickness, vitrification, stage stability, beam damage, contamination, …
